Thread: [\[3/5\] Debian update for qemu](#)

Omniscient - May 2, 2007, 12:12 am

Debian has issued an update for qemu. This fixes some vulnerabilities, which can be exploited by malicious users to bypass certain security restrictions and cause a DoS (Denial of Service).

Be sure to check if your system is missing security updates or have insecure applications installed:
http://secunia.com/software_inspector/

Feature Overview - The Secunia Software Inspector:

- Detects insecure versions of applications installed

- Verifies that all Microsoft patches are applied

- Assists you in updating your system and applications

- Runs through your browser. No installation or download is required.
