Thread: [crypted keylogger](#)

distefano - September 27, 2015, 8:00 am

I have a little question .

if i crypt the keylogger and bind it to an other file , will it still install without asking some passord ?
will it install flawless without beeing seen ?

thanks in advance

thanks in advanceWhat keylogger is asking for a password? what crypter?

If you use a decent keylogger and crypter, it will work fine.

Keylogger doesnt ask for any password, it executes silently

Note that binding your .exe to a .jpg or .txt won't make it a plain .txt or .jpg lmao

distefano - September 28, 2015, 8:35 am

yes i am aware of that , i bind it to an exe

DamienVC - September 28, 2015, 8:49 am

Depends on the "other file" 's detection rates as well.

If you are talking about User Account Control(UAC) password, it depends on how the crypter and keylogger are functioning. If the keylogger asks for password(system admin password) before crypting, it will mostly ask for you to verify your password even after crypting as well. But if the raw file(before crypting) doesn't ask for password and crypted file asks for password , it means that the crypter you used is not fit for your needs.
