Thread: [\[Release\]\[Source\]\[Free\]Pentesting Forever's Prank Pack](#)

LogoiLab - September 28, 2015, 4:38 pm

This is just a small release I'm making. The only thing I ask in return is that when you use these send me a report on the hilarious outcome.

PentestingForever's Prank Pack v1.1.3

There are 5 pranks in this pack, all coded in PowerShell, they will remain FUD for a VERY long time as long as you guys don't abuse them(they're all custom coded, no pre-existing source was used)

FreakDetections - Makes any antivirus freak out with false detection(EICAR test string) so much so that the antivirus may crash or the computer will hang.

GhostTray - Pops the CD tray at very random intervals repeatedly(you can set this yourself but the default is for it to pop any time between 1 second and 120 seconds).

LockGasm - Locks the mouse in the upper left corner, Locks the keyboard, disables soft shutdown, kills anything that can close it, turns the volume on MAX and play a video of your choosing on loop(porn works best)(this is a very funny senior prank).

RogueSpooler - This will print either black or character covered sheets of paper to every printer on a network(use with digression).

TechnoSermon - Will turn the volume on MAX and "speak" the text you provide it(Microsoft SAM for the win).

All of these pranks are epic(as you can tell). You can check out the source or download the entire source package from below. The source comes with "easy compile", something I whipped up real quick to make compiling to a binary easy on you guys. You simply click the "Compile!" link that is in each prank's respective folder.

Here is the link:

<http://ha.x10.bz/prank.html>

There is a license file associated with this, and also please note:

The source is being provided to you, please do not complain about a "virus" unless you have proof. I am not saying this to defend myself, I'm just saying this because I KNOW it's clean cause I coded it. If you have any concerns what so ever though please feel free to ask me.

Also, please remember that I would love to get a report from you on how you use these and what the outcome is.

On a side note, if there is any prank you'd like to see or you would like me to create please give me your suggestions! I'd love to hear(I like a good prank too)! And who knows, if I make a prank you suggest, I might name it after you.

Try a webcam activation on-screen with some creepy text to command the victim to watch carefully. Then go for the jumpscare. Webcam should record to capture the reaction, naturally. Nice, harmless little scare pranks are always a killer at parties.

Cool idea...will work on that. Webcam drivers tend to be finiky so we'll see how it works out.

Would there be a way for say it made them turn there Skype camera on in separate intervals say every 5mins for 30secs to a minute? I think that would be a big troll to see how long your friend/s take to notice it well your sitting back having a laugh.

Sc3ptical - September 28, 2015, 11:15 pm

Thanks for the share OP much appreciated never been into much pranking but I think I will be now.

It seems you guys really want to see some webcam action ?. I'll get to work on that.

Cip4rBunni - May 2, 2026, 12:26 am

I had one I put on my daughter's pc years ago that turned volume to max and would randomly swear at her. Drove her nuts I always loved pranks all the way back to the start button aversion one

Those PowerShell tricks are a fun reminder that even “legitimate” scripting can become a prank weapon. One thing you might consider for the next update is adding a simple “self-destruct” flag (e.g., a registry key or hidden file) so the payload can be disabled remotely without having to reboot the machine—makes cleanup a lot cleaner after the laughs. Also, for the webcam idea, tapping the Windows Media Capture API instead of the Skype process avoids version-specific quirks and works on any camera device. Just a thought for when you flesh out that “creepy on-screen” feature!
