Legends Remote Administrator Start Pack v.1

Legends Remote Administrator Start Pack has been designed from some of the most experienced users to deliver new users the basic fundamentals to start using Remote Administrative Software immediately and without delay. The package contains an entire suite of software commonly used for Remote Administrative tasks, including Remote Administrative Tools, Binary Crypters, Binders, Spoofers and Icon changers.

Complete Software Manifest

Remote Administrative Tools:

- Babylon 1.6.0.0
- Dark Comet 5.3.1
- jRAT
- njRAT 0.7d
- Sub7 0.10
- xRAT 2.0 r4

Binary Binding:

- RedLions Binder
- Shock Labs File Binder
- Simple Binder

Crypters:

- Fly Crypter 2d
- ICryptex
- Chrome Crypter 4.9
- Infinity Crypter
- Moon Crypter

File Masking:

- Icon Changer
- Resource Hacker

Velocity™ - September 28, 2015, 11:09 pm

Very nice Armada, excellent pack.

Well worth it :D

Sundance - September 28, 2015, 11:36 pm

Very Very Nice Pack Armada Thanks so much ! Vouch, HQ Content as Always ! ?

zalmaykhan - September 29, 2015, 12:49 am

where to find its tutorial? i am here just for learning and how can i learn from it? i am interested in getting network security job for that i come here to learn.

Inj3ct0r? - September 29, 2015, 12:52 am

HQ as always.. good job! hope to see more such threads coming :)

Windows 10 - September 29, 2015, 2:42 am

Nice post OP, I was a little skeptical about the download though..

"http://nationalecurityagency.party/files/Legends_Rat_Start_Pack_v1.exe"

WitchKing - September 29, 2015, 2:48 am

thanks for this pack ??m^aDa

lotusneo - September 29, 2015, 5:18 am

Thank you sir, will try to find some tutorials for this

RichyTheRealist - September 29, 2015, 6:36 am

Do you have any tutorials or would be willing to teach a beginner into this type of "work"

Done being a victim time for action

DamienVC - September 29, 2015, 7:21 am

Pre-tested it and I'd say its a very handy pack of cool software.

Sharkky - September 29, 2015, 10:28 am

lmao

virus.exe

I'm not opening that :rofl:

Maybe, just maybe compressing it in *.zip would be less suspicious.

Armada - September 29, 2015, 10:34 am

Sorry I do not do shit 1/2 assed.
Feel free to ignore this post if you don't trust it. Does not impact me any, lol. ?

On the note of security:
sharkky brings up a VERY valid point.
New and Beginner users are cautioned to be extremely careful in which Binary (exe) files they accept or run. Only accept or trust files from sources that can be trusted, review user feedback and others comments regarding the users before ever taking any form of executable from anyone around here, or online in general.

Cool pack, any screenshots of it or does it just download the seperate things on your pc?

It is a pre-built pack of the software, the Download IS all of the software wrapped together cleanly in an Installation.

Wow just what we need more downloads to shit that hs already been posted
4000000000000000000000000000 times before very HQ!

See here is the difference between you and me.
And the Irony that lies in all of this.

You and me, we have a common element we share believe it or not.
We both distribute Malware to the HF community. This post is a Link to download Malware.
(Technically, I am distributing malware to the members, TECHNICALLY)

But see, my malware distribution is not intended to INFECT the members.

Unlike Yours.
For example [Here](#) and [Here](#)

Now you gonna spam my threads trying to discredit me like anyone is going to listen to your bull shit over me.

Bitch please, You don't even equate to the dirt I walk on.
I understand your mad Chester. It must be real annoying someone like me shits all over you for your stupidity and no one on the forum will back you up, instead staff closes your topics, and gives

you warnings before eventually closing the current account you are dicking around on.

Your immaturity does not impact or phase me. If your so against me, why not take focus and target me in specific?

That would be a gold honeypot for you no? RATting your newly found enemy? Come at me bitch, I dare you to try.?

- Until then, stay the hell out of my threads you waste of genetic material and oxygen.

seppukusaga - September 29, 2015, 4:48 pm

does this have all the newest versions of those programs

Armada - September 29, 2015, 4:50 pm

(Sep 29, 2015 04:48 PM)seppukusaga Wrote: [\[CITE\]](#) does this have all the newest versions of those programs

As of posting date, Yes.

I have created version numbering in anticipation of future updates. ?

Raymond Reddington - September 30, 2015, 1:46 am

A great starter pack for all the beginners, well done Armada :)

NoHax - September 30, 2015, 6:34 am

Very well done starter pack, good job mate!

Slickbox - September 30, 2015, 7:13 am

Sounds like a nice set of programmes. Thank you for that

BITCHLESS - September 30, 2015, 8:52 am

Good Job! Thanks for this pack!

Zargos - September 30, 2015, 10:36 am

Hey, this does look a bit nice, but when I start installing it my Security program finds the following threats popping up:

Backdoor:Win32/Dodiw.A
VirTool:Win32/VBInject.gen!DG
VirTool:Win32/DelfInject.gen!CP
Backdoor:Win32/Fynloski.L
VirTool:MSIL/Subti.E
VirTool:Win32/Vbinder.CO
Trojan:Win32/Toga!rfn
Constructor:MSIL/VB.B
VirTool:MSIL/Bladabindi.A
Trojan:Win32/Skeeyah.A!rfn
Trojan:Win32/Dynamer!ac

Now, I am no computer professional but I am above average and with a little research I could quickly find out about these different names, now I do know that some programs do use files that will cause Security programs to react, but this seems a tad bit excessive doesnt it? Any explanation for all of these? Not trying to discredit you, Just looking for a reasonable explanation.

Dearest Regards.

But of course your systems security went bat shit crazy, I would in fact be disappointed if it did not.

Cold hard fact

- This is Malware.

Anti viruses and Anti-malware applications LOVE this stuff, because they actually get to do their job.

You absolutely MUST, turn off your AV and protective apps while installing, and add the folder exception of the installation directory.

To the new user, your all like "WTF, you expect me to trust software from a hacker?" - In fact, no I don't. But I provide it, and I guarantee even though your anti viral is going nuts, the files won't harm YOU, the controller.?

In the Hacking and IT security we consider these to be "False Positives"

- Yes, it's a hit on the AV radar, but AVs also define hacker TOOLS as viruses as well, and remove.
- Keep this in consideration.

aesad - September 30, 2015, 10:43 am

Thank you for sharing this pack. I will test them.

Zargos - September 30, 2015, 11:08 am

Ok, well I'll give it a go, not hard reinstalling my computer if things get fucked up anyways x) Gotta gamble to win I guess, thanks :)

ScammerHD - September 30, 2015, 12:28 pm

One of the few packs I would recommend, very trusted user and a nice collection of tools!

Eternal. - September 30, 2015, 7:21 pm

A great beginner pack, I am sure many people will find this to be very useful.

BACKDOORED!!!!!!!!!!!!!!

No they are not, this is a trusted source for your RAT needs.

fabienturquois - October 11, 2015, 7:59 am

Very Very Nice Pack Armada Thanks so much ! Vouch, HQ Content as Always !

pnutx - October 12, 2015, 4:48 am

I'm curious why don't you just make a zip with all of them? Why an installer?

Armada - October 12, 2015, 6:30 am

(Oct 12, 2015 04:48 AM)pnutx Wrote: [\[CITE\]](#) I'm curious why don't you just make a zip with all of them? Why an installer?

Why use zip when I can make a professional installer?

thechoosenone - October 12, 2015, 6:41 am

(Oct 12, 2015 06:30 AM)??m^aDa Wrote: [\[CITE\]](#) Why use zip when I can make a professional installer?

Use a ZIP cuz then we can see the files that are going to be on our pc.. with an installer it just does it and we have no idea what files are now on our pc..

Armada - October 12, 2015, 6:46 am

(Oct 12, 2015 06:41 AM)thechoosenone Wrote: [\[CITE\]](#) Use a ZIP cuz then we can see the files that are going to be on our pc.. with an installer it just does it and we have no idea what files are now on our pc..

Watch what the installer drops.

Any files placed in the system go in to the installation directory. there is no trickery involved here. If you dislike the installer, dont use the software, download each application stand alone and place it on the system yourself. No one is forcing you to use the software, its an option for new users.

I was just saying for installer you would already be infected without knowing what files have caused it, while for a zip you can know from beginning.

Armada - October 12, 2015, 6:55 am

Any post I make, including malware such as this is clean. I do not infect the member base, nor would the users of this site show me such trust if I ever attempted something as retarded as that. But again, you are free to trust or mistrust this suite of applications to your own degree. You are not forced to use the software you can always take the package contents listing and do it manually, everything is readily available on the site for download in their own threads.

This was made for ease of convenience for new users. You can make this debate all you wish, it will change nothing. The installer was not "Required" neither was this pack in total. so it is a trade off the way I see it.
