Thread: [\[Request\] Vb.net to PHP Socket Upload Example](#)

jessman420 - September 29, 2015, 7:32 am

I am looking for an example of how to make a socket connection from vb.net to php, for the purposes of uploading files.

My current operation using a webclient post, and I wonder if using a socket connection would allow me to hold open the connection and push multiple files thru the socket before timeout.

I am not experience with sockets, is there an advantage?

I am trying to limit my amount of web requests needed to upload a very large amount of files.

My hosting provider, sometimes blacklists my ip, because of how many requests I send at once. There ddos protection is the reason. Even if I only run 10 parallel threads.

Any thoughts or examples would be greatly appreciated.

This gives me some ideas, but I am still looking. Thank you for your reply

You don't need to use Sockets for this. Instead, you should use an `HttpWebRequest` and access the request stream, then just append the files as needed (via the POST data boundary). Do this and increase the Timeout value (or set it to -1, I think that may remove the timeout entirely?). It would also help to set the KeepAlive header to true on both the `HttpWebRequest` and server side. Uhh.. and I would personally keep concurrent connections per client down to 3 unless you are hosting on a VPS / dedi and have full control over the mitigation systems.

Aeonhack thank you for your reply. If there was an advantage to sockets you would no. I will look into using `HTTPWebRequest`, as for the timeout my hosting provider only allows 60 seconds, even with the timeout value set to -1. I may try to reduce the threads. I am considering buying a dedicated server to host my website, but my bandwidth is limited to 60mb/s, so instead a VPS is my next move as my site is very large, 250,000 items and I usually refresh about 30,000 items a week, complete with image and spec sheets, so I am quickly outgrowing my shared hosting provider.

Thank you for your insights, I will let you know how it works.
