Thread: [KMZ's USB HACKS V1.5 Viruser\[Custom Virus&More\]](#)

kmz22222 - October 1, 2015, 8:16 am

V1.0 [incase you missed it] :[hackforums\[DOT\]net/showthread.php?tid=5002325](#)

What is up guys KMZ here so you guys seems to be lovin v1.0 so i love to make a new MINI update.

please note that at the time of: Current time: 10-01-2015, 06:58 AM

at hack forum's time.. this thread is posted. so any other thread that have the same things here is basically is a copy of this thread.

Remember TeraBit Virus maker v3.2 From my latest best virus guide on hack forums? yes yes we will use it.

After this you should be able to:

- Destroy the windows of a computer in no time. [Extremely as fast as a click of a button]

- Make custom viruses which is able to do:

 - Delete All Files In Desktop

 - Disable Regedit,system restore and much more

 - Slow Down PC Speed

And many many more features. but i will mention Only some of best things you can do. [I will not post any download links since you may say it contains a virus, as usual you can use google as i mention the program[s] name[s].]

~

How to make the WIN PWNER

- 1-Download and open TeraBit Virus maker v3.2

- 2-Uncheck EVERYTHING that is checked and only check the feature: Disable CMD

- 2.5- You can crypt that if you want,i don't recommend trying this on your computer, You can messup with the setup,icon,etc...

For a fast crypton you can use the online crypter:[msil.pw](#) for helping.

- 3-after you finish everything put it in the USB

if the victim have an antivirus it will be detected unless you crypt it.

after you crypt it [or you don't if the victim have no antiviruses]

Basically copy and paste da virus in desktop and with a click of a button it will PWN the windows which makes it unable to run anymore [after restart] please note you may need ADMIN RIGHTS to do this.

~

How to make the DISTRACTOR

- 1-Download and open TeraBit Virus maker v3.2

- 2-Uncheck EVERYTHING that is checked and check the following features:

- Slow down PC,Play beep sound every sec,turn off monitor,turn off computer after 5 min

you may need also to crypt this and do the other stuff

- 3-you will basically do the same.. but it in ur usb go to ur victim pc put it then run it you may also make him opened it without even going to his pc and stuff.... the main idea of this is just a simple prank you can miss out with your friends and stuff.

Note: The Distractor virus SHOULD BE HARMLESS as i think so it doesn't harm the computer. [never tested it before]

So yeah guys i gave you 2 examples on what you can do with that cool virus maker... please also note you can put your custom command and other cool stuff. and i have no idea how is the coding done but if i see a HUGE Amount of thanks and stuff in the reply down below i may make the update

V1.9 Which will include the coding+how to make this as a simple bat and inject it to other stuff. otherwise if noone wants that i will do the simple update i planned for which is V2.0 [i wont tell what it will do right now].

Hope you guys enjoy and lemme know in the comments down below if you want v1.9 and the stuff i mentioned. i will be replying to replies as soon as i can. ENJOY!
