Thread: [Mouse Click, Center Of Form Or Webbrowser?](#)

Lexxi. - October 1, 2015, 8:20 am

Hello HF

i tried many ways of mouse click but no luck, tried searching but only found giving coords.

i want a mouse click to happen in the middle of the form so no matter where the form is (top screen, bottom) it will click in the center of the form

Odus - October 1, 2015, 8:29 am

If you placed whatever is in the middle of the forum, call its click event instead.

There was no mention of a browser in the OP. Instead of clicking the control, get the button or whatever on the web page it is' ID then invoke a click on it.

haha, thats what i use for buttons but this one doesnt have a button, its a game, when i inspect element outside it (the page) it gives element id but not for game only gives java options

Make a new Point and divide the form width and height by 2, then invoke a mouseclick on that Point

bho007 - October 1, 2015, 8:48 am

Code Private Declare Sub mouse_event Lib "user32" (ByVal dwFlags As Integer, ByVal dx As Integer, ByVal dy As Integer, ByVal cButtons As Integer, ByVal dwExtraInfo As Integer)

Sub MouseClickCenter()

Dim x As Integer = CInt(Me.Left + (Me.Width / 2))

Dim y As Integer = CInt(Me.Top + (Me.Height / 2))

Cursor.Position = New Point(x, y)

mouse_event(&H2, 0, 0, 0, 0)

mouse_event(&H4, 0, 0, 0, 0)

End Subi have made you this code try it ?

thanks alot, i had this code, my bad should of just use the me.width/2)) at end of it, thanks though

Thread closed- thanks for the code again :)
