Thread: [Babylon Connection Issues](#)

UntoldMythical - October 3, 2015, 2:11 pm

Ok, so I can't get Babylon to work. I can only seem to connect using local IP on my machine. I can't connect using DNS or my actual IP. I have forwarded all ports and either way it still doesn't seem to connect. Any help would be appreciated.

DarkComet works on this DNS but Babylon doesn't. I'm using DuckDNS

Are you sure your ports are opened correctly ?

What dns are you using?

Is your dns pointed at the correct location ?

Lumz - October 3, 2015, 3:37 pm

Did you try testing it using a vpn? If you dont have one i recomend RA4WVPN.

..

Anyways, disable all Firewalls/AVs

Then listen to the port and check if its open,

Use your internal IP for the DNS setup.

And its all done?
