Thread: [\[Extract Exif Data\]How to find out exact coordinates of a picture | OPT-OUT Method](#)

Zayzo - October 4, 2015, 9:31 pm

This is a very simple tutorial, yet very efficient to find out information based on a photo. This will work on any photo that has gps information attached. It will consist of a few steps.

First step, you will want to visit the site <http://geoimgr.com/>

Spoiler [\(Click to View\)](#)

Second step, you will want to get a photo, and upload it to the site above. You can now zoom in, using the map there, or move onto another page as listed below.

Spoiler [\(Click to View\)](#)

Now you have the coordinates and you can input the coordinates into google maps. (optional)

Spoiler [\(Click to View\)](#)

Now you have the exact location. This is the simplest way to do it, in a short explanation you can also:

Right Click Photo -> Properties -> Details -> Under GPS Information you have latitude & longitude.

This works best with photos taken from Iphones/Androids, as GPS info is embedded into the photo. (unless requested not to)

Using an android/iphone, this will show you how to opt-out of the gps information.

These photos below I take no credit for.

Iphone;

This is very helpful thanks

?A?O - October 5, 2015, 7:39 am

I have this in my large guide but MAT is amazing for dealing with metadata as well.

Link: <https://mat.boum.org/>

Barb - October 5, 2015, 11:26 am

Yeah, but most websites like popular social media sites like facebook, twitter, instagram, imgur strip all meta data in picture. I wish someone would start a list of places where they don't strip meta data.

That would be nice to see.

(Oct 5, 2015 07:39 AM)zer0 ? Wrote: [\[CITE\]](#) I have this in my large guide but MAT is amazing for dealing with metadata as well.

Link: <https://mat.boum.org/> Yes, it is. I find geoimgr, to be fairly simple enough for the average user, and very efficient.

I'll continue with some tutorials.

Zayzo - April 10, 2016, 12:17 pm

Putting this to the top, been a while.

Vicci - April 11, 2016, 7:34 am

I never thought about this. Very nice tutorial.

Zayzo - June 10, 2016, 6:02 pm

Bringing this to the top, in case anyone needed help. Expect more tutorials soon

fSystem - June 13, 2016, 1:57 am

Thanks, works great but just wondering if there is any known places that don't strip meta data?

Check The Name - June 13, 2016, 8:14 am

Great tutorial man :) Thanks for the share.
