Thread: [Duplicate tab multiple times instantly \(Google Chrome\)?](#)

sadsadsadsa - October 6, 2015, 10:12 pm

Hey guys I was just wondering if anyone had a way to duplicate a tab in google chrome lets say 1000 times or 10000 times instantly instead of duplicating the tab one by one. I am not looking for a marco to do it one by one either. I want an option to duplicate the tab as many times as I want instantly (Simultaneously in other words). If anyone has any insight into this odd request in would be appreciated.

I have a feeling this will crash your browser if not on a real high tech comp, it will crash my laptop for sure and thats i7 / 16GB.

But the only way I know how to do this is put the website as many times as you want to open in bookmarks then put then bookmarks in a folder and then the folder on your bookmarks toolbar then right click the folder and click open all or middle mouse button the folder.

It's very easy using a Python script or so.

Or make a bunch of shortcuts to the site on a folder and ctrl+a and mash enter.

Easily done through a scripting language such as python. Also note that my Firefox crashed when I ran the script. If you want to open a certain amount of tabs, shoot me a message and I'll add that, lol.

```
Code import webbrowser
amount = 0
beaver = 1
```

```
website = "www.google.com"
```

```
while amount < beaver:
    webbrowser.open(website)
```

    webbrowser.open(website)
```

"beaver" doesn't need to be there, just type 1 or something.
And add amount =+1 at the end.

Yeah I am aware, I did it in 20 seconds and didn't feel like making it more productive for such a simple task.?
