Thread: [Need help bypassing Captcha to submit form of a site](#)

sadsadsadsa - October 9, 2015, 12:03 am

Hey guys I would like to know if its possible to bypass captcha on this site and submit this form as many times as I want. Cheers.

Try to bypass a captcha by "reading" it with an OCR (Optical Character Recognition) software. You give it an image and it recognizes the characters in the image. Of course, you can implement an automate process to complete (Pyhton may be the best choice) a submit form.

Tesseract OCR is a good software to start with and it is free.

Its not possible to do it directly without using a program/3rd party. But it may be depending on how well the site was built.

You can easily do this with Sentry; just look up a few tutorials on OCR.
As long as it's not the new ReCaptcha you should be fine.

sadsadsadsa - October 10, 2015, 12:39 am

I was hoping to bypass it without using ocr or 3rd party software. It didn't used to have recaptcha and you could have submitted it as many times as you want. But it was added recently and if you try submit the old form all you get is an error telling you Human test failed.
