Thread: [Suggestions for begginer design](#)

inesnivy - October 10, 2015, 7:12 am

I'm an arts student and i would like to start either making graphic or web design, i have worked with some basic things in the Adobe illustrator at school. We made a portrait with letter,numbers etc...
If any of you could give me some tips where to start it would be great

If you're an arts student... shouldn't they (school/organization) be the one teaching you how to start

Gowther - October 10, 2015, 2:57 pm

um check out some youtube videos, that how i got started.

My school has a large amount of courses and most people don't enter on their first pick
Me being on my first year in that school I can try at least 2 lessons of them. So thinking ahead I'm trying to practise if I can enter on that course , and if I don't I'll be able to do it on my own

There are many tutorials. It's pretty easy to find help without having to post this lol.

Expand your skills on Illustrator and learn Photoshop, there are many great tutorials on Youtube and HF :)
