Thread: [Mac 10.8.5 Root Exploit?](#)

h?ck?r - October 11, 2015, 2:17 pm

Is there a root exploit for Mac 10.8.5? I have one for 10.9.5 but I'm looking for an earlier one. If anyone knows one could they share it? Thanks!

The link below works on mac 10.7.0 to 10.10.2 to gain root access.

<https://truesecdev.wordpress.com/2015/04/09/hidden-backdoor-api-to-root-privileges-in-apple-os-x/>

You can consider downloading and running the crafted sh with mac macro exploit too.
