Hello everyone, I was wondering if either of these RATs work with up to date devices, or if they even work at all. If anyone knows anything regarding Android RATs or have any experience with them, I would love your assistance and if possible, would love a clean copy of one. I would rather obtain a copy from you guys than some shady site in the deep web.

I am looking for a RAT that performs like any other RAT you would use such as DarkComet on Windows. Thanks guys! ??

Try to ask Zinister uid=2237739

I saw his thread tid=4555580

DroidRat and DroidJack are still working on Lolly. I've never used DarkComet, so I can't say if they perform the same or not, but I know those 2 are still kicking serious ass.
