Thread: [\[High Quality\] List of 51 high quality available domains, perfect for SEO.](#)

? Soufian ? - October 12, 2015, 2:49 pm

Sup guys,

I've been checking out domains for a long time today.

And I got a list with some awesome domains which are perfect for SEO purposes.

Since most people love reading threads in silence without thanking the OP, you will have to PM me in order to get the list.

Responding in the thread with your opinion afterwards would be appreciated. :)

I'm interested with that list, but I am unable to send a PM right now. Can I get this please? Thanks man! :)

It seems that you don't have any experience in SEO at all.

Both are really important.

With a SEO friendly domain you get even higher than usual.

(If you do it the right way)

I should agree with this guy. There are thousands of examples when domain name is a creative one, which is far away from the product it is offering. The success lays in the rich content, nicely written titles, h tags, descriptions, meta stuff, contains photos with logical alt tags, backlinks to notable resources etc.

Probably his list is fulfilled of domains with good/high metrics (PA, DA etc) useful for building a PBN.
