DisguiserNET - October 15, 2015, 1:27 am

Thanks for an other awesome opensource project from you

SIM-1676753 - October 15, 2015, 2:01 am

Looks like: <https://www.jitbit.com/macro-recorder/>

Good shit Bah. Hopefully we will see more updates.

BahNahNah - October 15, 2015, 2:08 am

Good shit Bah. Hopefully we will see more updates.

Thats where i got the idea ;P

Im working on an editing system currently so i can add the process commands and more.

Obfuscating - October 15, 2015, 3:09 am

This is actually really nice. Does this program use send keys when you playback what you've recorded? And is each recording stored, so you can close the tool and still use the previous recording later on?

King of Clubs - October 15, 2015, 3:12 am

Looks solid. Good release. Nice project. Well done

BahNahNah - October 15, 2015, 3:16 am

No it does not use sendkeys.

You can save the macros to a file, the they can be loaded and played.

Obfuscating - October 15, 2015, 3:18 am

(Oct 15, 2015 03:16 AM)BahNahNah Wrote: [\[CITE\]](#) No it does not use sendkeys.

You can save the macros to a file, then they can be loaded and played.

So, I can use my computer while the program is running, or will it affect my typing and mouse while playing back? It would be nice to use this as a bot.

BahNahNah - October 15, 2015, 3:21 am

It's a macro program, so it will simulate mouse movement and keyboard presses.

It just doesn't use SendKeys for its keyboard simulation.

Hashmumu - November 18, 2020, 6:38 am

Hey Bahnahnah, sorry for the post as I can see you are still not banned so I'll have to comment this since I have no other choice, can I do something else in the background while the script is running? I've tried contacting the support but they don't provide support for those who don't have purchased package aka serial key

BahNahNah - November 18, 2020, 9:30 pm

I do not know what you are talking about. Key for what?

Doesn't matter, just asking how can my macro script be ran so I can do other stuff while the macro script is running, I'm using Jitbit macro recorder, this been a problem for a while I had to use VMware but the con is that the VM uses too much resources and it's not worth for me

gigajew - November 19, 2020, 7:45 pm

Awesome man. Good to see you still coding.

Nzt - December 8, 2020, 12:58 am

I made one in Python but was looking for one either made in C++ or C# thanks!

OracleAuto - December 8, 2020, 5:09 pm

It does matter, you're using Jitbit but asking questions about this macro recorder.

I didn't ask anything about this "powerless" recorder, nothing special about it nor interested in it, just waste of time coding this to show off how "cool hacker/coder" you are OP

Neg = clown

OracleAuto - December 9, 2020, 6:31 pm

Neg = clown

Complains and calls it powerless, proceeds to ask a basic ass question about a shitty old Jitbit.

Code one better, I'll be waiting.

Shitty? It's the most powerful macro in this world, no one can surpass this, it got tons of features , and yeah it's shitty if you can't use it to full potential, you have no idea what lengths you can reach with it if you know what you are doing, u foolish mortal

OracleAuto - December 17, 2020, 2:18 pm

Sorry bro, I got better things to do than making a club penguin account creator.

riu41776 - December 18, 2020, 5:39 am

SetWindowsHookEx is a major player here which is why you are limited only to input monitoring. and this app will work only on Windows because of this api and framework.

Besides that, if you'd like to log process creation or file system activity you can use WMI feature in windows, a win32api that you can hook into that monitors such events or use a software driver.

I wouldn't doubt if there's an open source library that you can consume to listen to other events on the system.

<https://docs.microsoft.com/en-us/windows/win32/wmisdk/monitoring-events>

Good job on this project, good for your cv. Good day

Hashmumu - December 22, 2020, 6:30 am

What are those better things? Wanking all day and watching porn? Better get it before the site goes down, you'll regret it , save to google drive or smth

You can dislike\like bot, grind all various stuff in every game without wasting your life, nothing surpasses it, every secret is inside there, if you got 0 brain cells then yeah go ahead and ignore me

Not sure if you're aware but most people get up and HK to work every day, not sit there creating YouTube bots via a shitty macro program

Anyone with serious intent and proper coding knowledge can create better than Jitbit, the people that use it are the ones incapable of coding themselves.

Hashmumu - December 23, 2020, 9:55 am

That's not their fault if they can't code , if their brain structure is different from others, or potential has a limit

OracleAuto - December 25, 2020, 12:06 am
