Thread: [\[FREE\]Gaudox HTTP Bot \(1.1.0.1\) | C++/ASM | Ring3 Rootkit | Watchdog | Antis | Stable](#)

excr4sh - October 15, 2015, 6:17 am

Project is closed, download link is not available anymore, don't ask for it.

Gaudox HTTP

Gaudox is an HTTP loader completely coded from scratch in C/C++ language with a few lines of Assembly, which means that it does not require of any dependencies (C-Runtime, NET Framework, Java VM). The bot has been fully tested and working on all Windows versions from Windows XP SP2 to Windows 10 (32/64-bit). It is also worth mentioning that I coded this bot with very efficient and stable designed code to handle thousands of connections at once.

Features:

Usermode Rootkit

Bot has Rootkit functionality which hides all bot resources and prevents from being accessed from explorer process. This feature does not drop any to disk, the code is internally embedded in the bot file and injected in the target process from memory. It is also has self-protection that prevents the hooks from being removed by third-party programs or any security tool. This feature is currently working on 32-bit systems.

Persistence/Watchdog

Bot prevents it from being removed from the system by bot killers, security tools or user actions. This feature is currently supporting process protection and working on both 32/64-bit systems but its maximum compatibility is in 32-bit.

Traffic Encrypted

The communication between the bot and the control panel is obfuscated. This prevents middle attacks.

Anti-Analysis/Research

Bot contains several methods for preventing from being analyzed by researchers or unauthorized users. some methods are from preventing static analysis by obfuscating code, data up to detect the presence of debuggers, avoid running the bot in virtualized environments, etc. some methods may not be mentioned.

Commands:

- [+] Download and execute (Drop&Exec)
- [+] Visit Website (Visible)
- [+] Update Client
- [+] Uninstall Client

Panel

[img]http://i.imgsafe.org/627e2d4.jpg[/img]

[img]http://i.imgsafe.org/e1736c8.jpg[/img]
(got this screenshot on jabber)

[img]http://i.imgsafe.org/acb1430.jpg[/img]
[img]http://i.imgsafe.org/bb2c161.png[/img]
[img]http://i.imgsafe.org/3194cfd.png[/img]

Builder

[img]http://i.imgsafe.org/251b9fb.jpg[/img]
[img]http://i.imgsafe.org/27a48f1.jpg[/img]
[img]http://i.imgsafe.org/29caf7e.jpg[/img]
[img]http://i.imgsafe.org/2c55ddc.jpg[/img]
[img]http://i.imgsafe.org/a91d043.jpg[/img]

Gaudox v1.1.0.1.exe

MD5: 1AF2E1B11B1D7543A19662F7291856F4

SHA-1: DE5BD976FB5A4B50D8C8739E6B9F286F5B1A4798

1.1.0.1.rar

MD5: F99A3FBDEB1B0CD12BB1E6ED700ADE90

SHA-1: A00A2B6D6C5806C75C5551073283D1218AC017C8

How to install:

- 1) Open the Builder and create a new profile, you will use these values KEY #1 and KEY #2 in the panel.
- 2) Create a new database (recommended)
- 3) Open setup.php with browser and complete the form.
- 4) Delete setup.php and open login.php with browser.
- 5) When creating the bot clients do not forget to use the same profile you used to install the panel, otherwise the bots will not connect to the panel.

Notes:

- 1) I highly recommend disabling strict mode in MySQL.
- 2) If you test the bot from a local server, the panel may be showing "US" in location, it's not an error, the panel expects to always get an external IP.

Tut by Jar1: <https://hackforums.net/showthread.php?tid=5084324>

How to update:

1.1.0.0 to 1.1.0.1+

You will need to install the panel again, sorry for the inconvenience. The database is now the final version and it would be compatible with all future versions (I hope, unless I have forgotten something or want to add a new feature, in any case I will code a script to update the database).

Changelog:

Spoiler ([Click to View](#))

1.1.0.1 (15-12-2015)

Code Bot

- * Fixed issue with Uninstall command
- * Anti-Virtual machine methods have been enabled

Panel

- * Fixed issue with location
- * Added captcha in login page

1.1.0.0 (30-11-2015)

Code Bot

- * Implemented Ring3 Rootkit for 32-bit versions of Windows
- * Implemented Watchdog/Persistence to prevent from being removed
- * Communication between the bot and the control panel is now encrypted
- * Anti-Analysis/Researching methods added
- * Core improved

Panel

* Panel completely recoded and using PDO extension which means it's more secure against SQL injections and other attacks.

* Improved the appearance of the panel, images for countries were added, ability to change password, etc.

1.0.0.0 (15-10-2015)

Code * First release

Windows 10 - October 15, 2015, 6:26 am

Oooo a new botnet, nice, The images are broken though.

J?son - October 15, 2015, 6:34 am

Looks nice. The images are not broken though.

D-o-x-i-n-g - October 15, 2015, 7:05 am

Looks nice ima try it out rn.

ThePacketBaron - October 15, 2015, 7:36 am

Thanks for posting this man :D

Rory Guidry - October 15, 2015, 8:06 am

Any chance of open sourcing this or sharing the code? I have no interest in monetizing it, just want to learn and study your code as I find it to be the most effective method and this seems fairly well made.

Venom0 - October 15, 2015, 8:56 am

(Oct 15, 2015 08:06 AM)Rory Guidry Wrote: [\[CITE\]](#) Any chance of open sourcing this or sharing the code? I have no interest in monetizing it, just want to learn and study your code as I find it to be the most effective method and this seems fairly well made.

kms back from jail already? jk

But yeah what he said you're probably not too keen on releasing the source but if you could that would be really cool for the rest of us to learn

Rory Guidry - October 15, 2015, 8:59 am

(Oct 15, 2015 08:56 AM)Venom0 Wrote: [\[CITE\]](#) kms back from jail already? jk

Well KMS is actually free now, snitched but that's off topic.

I checked out this bot just now and it works really well, would be nice to be able to improve it myself though or if it was up on github it could be a group project.

Klaus123 - October 15, 2015, 12:26 pm

(Oct 15, 2015 08:06 AM)Rory Guidry Wrote: [\[CITE\]](#) Any chance of open sourcing this or sharing the code? I have no interest in monetizing it, just want to learn and study your code as I find it to be the most effective method and this seems fairly well made.

i agree.?

excr4sh - October 15, 2015, 1:10 pm

Thanks and about whether this would be open source or not, I doubt it but never would say no or impossible. at the moment this would not be open source.

Wait for updates.

Hoodie+ - October 15, 2015, 1:47 pm

Nice basic botnet.

I like basic botnets.

Good job!

Proxseas - October 15, 2015, 3:50 pm

Nice to see you contributing to this section.

Uiqueblhats - October 16, 2015, 7:40 am

It will be best freeware bot i guess

excr4sh - October 16, 2015, 2:56 pm

Thanks and for those wondering if I will improve the panel, yes I will do but for now I want to focus the time adding more features and other things.

PurpleGalaxy - October 17, 2015, 6:23 pm

Webpanel 500 error, I guess SSI includes are used and not supported on my host.

excr4sh - October 18, 2015, 11:19 pm

(Oct 17, 2015 06:23 PM)Anonymousx Wrote: [\[CITE\]](#) Webpanel 500 error, I guess SSI includes are used and not supported on my host.Maybe if you give more details about the error, check the log file.

Seems I forgot to add the minimum version of PHP required for the panel but it doesn't use any new feature of PHP.

TheNaked - October 19, 2015, 12:06 am

Amazing job with this, looks very good so far.

Raymond Reddington - October 19, 2015, 12:10 am

Posting to keep a track of this. Well done op!

N1c1as - October 19, 2015, 12:52 am

Thanks man look slick definitely going to try that!

N1c1as - October 21, 2015, 11:40 pm

When I run the stub in the client side I see communication from him to server but I can't see the client on the bot panel...

Is this a known problem?

Furorem - October 22, 2015, 12:56 am

Not bad at all, lets follow this thread! :)

Egghead - October 22, 2015, 1:00 am

It's kind of you to release a free HTTP bot without any dependencies. I respect that greatly.

Agent Raigar - October 22, 2015, 1:03 am

It's so kind that it might actually be sketchy for someone to use it.

Egghead - October 22, 2015, 1:04 am

(Oct 22, 2015 01:03 AM)Agent Raigar Wrote: [\[CITE\]](#) It's so kind that it might actually be sketchy for someone to use it.

I'm definitely not going to use it, because I'm naturally cautious.

You never know when someone might have ulterior motives.

imSoGettingBANN?D - October 22, 2015, 3:30 am

add a ddos option an maybe more people will use it

excr4sh - October 22, 2015, 8:33 am

(Oct 21, 2015 11:40 PM)N1c1as Wrote: [\[CITE\]](#) When I run the stub in the client side I see communication from him to server but I can't see the client on the bot panel...

Is this a known problem?Maybe if you give more details about the machine on which you tested it, I tested this bot from Windows XP to Windows 8.1 (32/64-bit) and it worked perfectly on localhost and real scenario. Note that I have not tested it on Windows 10 but I cannot imagine why it would not. Did you test it on Windows 10?

(Oct 22, 2015 01:04 AM)Egghead Wrote: [\[CITE\]](#) I'm definitely not going to use it, because I'm naturally cautious.

You never know when someone might have ulterior motives.If you think this is infected or something like that, you can analyze it. the program (builder and stub) doesn't have any protection against analysis so you are free to check it out.

deepdeath - October 22, 2015, 8:56 am

Great job on this happy someone just put out a little panel for free so users to start learning how nets run.

excr4sh - October 22, 2015, 1:27 pm

(Oct 22, 2015 03:30 AM)imSoGettingBANN?D Wrote: [\[CITE\]](#) add a ddos option an maybe more people will use itI don't think I would be adding DDoS option bro.

DrDoktor - October 22, 2015, 7:05 pm

I wonder if you can use tor2web with this

Short

Parnassius - October 22, 2015, 9:16 pm

Your panel looks like it's based off the panel from _Stoner's bot (Athena)

excr4sh - October 22, 2015, 10:23 pm

(Oct 22, 2015 09:16 PM)Parnassius Wrote: [\[CITE\]](#) Your panel looks like it's based off the panel from _Stoner's bot (Athena)The only thing I see similar is that both have a top bar and a side of black color, but because of that one can say that a panel is based on another just by their color and style?

For something as simple as this panel I wrote I don't think anyone needs some code from another panel, knowing the basics of HTML and CSS is enough.

But well, I think I would be using bootstrap for the new upgrade I had thought to release this week, the update is finished, I just want to do some testing in real scenario but before that I want to code another panel which would be the final appearance so it will take a few days since I'm a little busy with other projects. Also I would be recoding the panel, I mean the PHP code and using PDO instead of the mysql_xx functions.

letmebe - October 23, 2015, 1:22 am

will this work on a tor hidden service? .onion site?

Cecilia - October 23, 2015, 1:35 am

Why are you using deprecated php?

mysql_* is very old, there is no reason to not use mysqli_*

excr4sh - October 23, 2015, 2:24 am

(Oct 23, 2015 01:22 AM)letmebe Wrote: [\[CITE\]](#) will this work on a tor hidden service? .onion site?It will when I add tor.

(Oct 23, 2015 01:35 AM)LaPanthere Wrote: [\[CITE\]](#) Why are you using deprecated php?

mysql_* is very old, there is no reason to not use mysqli_*

<https://hackforums.net/showthread.php?tid=5022902&pid=48292544#pid48292544>

I would be coding the panel using PDO.

tux1 - October 23, 2015, 7:33 am

Nice little project, good to see hf still producing some good programs.

doomkit - October 23, 2015, 10:58 pm

thanks for sharing. it will help complete colection of my botnet

NTTITONV243 - October 25, 2015, 3:51 am

You should consider adding a rootkit and a UAC bypass exploit - would be enough to substitute 99% of all the shit botnets being sold here cough EntryHTTP cough

Also, why don't you add a backup C&C option - would be useful for potential users.

Webpanel looks like shit, try improving that.

excr4sh - October 25, 2015, 4:56 am

(Oct 25, 2015 03:51 AM)NTTITONV243 Wrote: [\[CITE\]](#) You should consider adding a rootkit and a UAC bypass exploit - would be enough to substitute 99% of all the shit botnets being sold here cough EntryHTTP cough

Also, why don't you add a backup C&C option - would be useful for potential users.

Webpanel looks like shit, try improving that.Hello,

The update is already finished as I said above, it includes Ring3 Rootkit, Persistence and other things that I would be detailing when I post it. Backing up the C&C is good idea really.

UAC bypass - Well I know it would be great and it would be easy to add it. Yes I know, the ones used by Dridex and other, reconstructed by EP.

About the panel, relax, I'm coding the panel for this bot in my free time, in these days, I'm busy as hell so be patient, a quick look:

[img]<http://s23.postimg.org/lkxh4gbc/new.png>[/img]

Rombertik - October 25, 2015, 6:21 am

The update is already finished as I said above, it includes Ring3 Rootkit, Persistence and other things that I would be detailing when I post it. Backing up the C&C is good idea really.

How would you be achieving persistence? I hope so you don't use the ZwFunctions and brand it as "persistence" as the rest of the "coders" here tend to do. Do you intend to add a watchdog/monitor process?

Backup C&C is useful and pretty simple to get functional - both of us know it wouldn't be hard to get that added.

Do you intend to use the Native WinAPI to go with the rootkit?

Please don't hook "NtQueryWindowsSystemInformation" /sarcasm

You could also hook fastsyscall and NtFunctions to achieve the rootkit, ring3 is enough for a free botnet.

UAC bypass - Well I know it would be great and it would be easy to add it. Yes I know, the ones used by Dridex and other, reconstructed by EP.

Its pretty easy if you're intending to add the Social Engineer type method; wouldn't take a few seconds for that.

But if you're moving forward for a real exploit - simply writing/storing the DLL in a secure location would not work though, you would have to include proper process elevation, store your executable in a secure location (comparatively easy), and it must be signed by "Microsoft" for all to be completed.

You could go along with epathobj; since its freely available and this botnet is also freeware.

Abducted - November 10, 2015, 7:14 am

I don't know, for me it doesn't work. When I try to open any page except login.php I get an empty screen.

5chn4pp - November 10, 2015, 7:27 am

I would really like a TOR feature, it would be a awesome botnet.

Teh1337Taco - November 13, 2015, 12:41 pm

Nice release dude! I've tested it a bit and from what I can tell it's stable and works like a charm!

p.s I've been over it to look for backdoors and such and it all seems clean.

SimoxFX - November 13, 2015, 2:26 pm

prntscr(.)com/92gxlj how i can resolve?

Would love to test!

jar1 - November 30, 2015, 9:47 am

Free to test it also. PM if you want.

excr4sh - November 30, 2015, 12:49 pm

New release, go to post #1

Holger - November 30, 2015, 1:47 pm

Thanks you for writing this update and review.

xSublimation - November 30, 2015, 2:47 pm

Hey website visit function it's visible or hidden ?

jkavdaju - November 30, 2015, 9:04 pm

Nice release dude! I've tested it a bit and from what I can tell it's stable and works like a charm!

p.s I've been over it to look for backdoors and such and it all seems clean.

jar1 - December 1, 2015, 7:15 am

I've tested and work great.

P.S: I disable Eset SS9 to build the client and run it. When the client successfully installed i scan my computer again and didn't find anything.

kuradox - December 1, 2015, 10:37 am

what this error bro --> prntscr(.)com/996ec5 ?

(Dec 1, 2015 08:15 AM)jar1 Wrote: [\[CITE\]](#) I've tested and work great.

because Eset byppassed , works for pretty FordCI Looks like it's already installed? Did you try to install it multiple times?

When installing, do not press multiple times the button, just wait a few minutes. the script takes ~2-5 to import the geoip to the database.

FerdigStudios - December 1, 2015, 10:07 pm

Anyone wanna help me out, Its not working!

jar1 - December 2, 2015, 5:25 am

(Dec 1, 2015 11:07 PM)FerdigStudios Wrote: [\[CITE\]](#) Anyone wanna help me out, Its not working! Worked great for me ! What's your issue ?

kuradox - December 2, 2015, 5:55 am

--edit : it work sorry :D

herrgutt - December 2, 2015, 11:29 am

Do you mind elaborating how the server talks with the PHP script? Anyways, awesome bot! :-)

NotRandom - December 2, 2015, 4:55 pm

So shortly after running the exe, this happened. It's a clean VM with nothing else than Gaudox. I'm not saying it's Gaudox causing this, but i will investigate further.

EDIT, Well aparantly i cannot post image yet... stupi* sh**

imgus.net/i/c7859fda6b49e79f5c56368d201798c0.png

Ain't a fun domain to google...From what I see in that image, the process or service "vmnet-natd" is trying to connect to Windows servers. so what is "vmnet-natd"?

if you google it, you will find that its a vmware process. gaudox both builder and stub are 100% clean. if anyone thinks that the file is infected or something like that, take a debugger and analyze it, the builder doesn't have anti-debugging/anti-vm, or use an online sandbox.

What you see is that VMWare or Windows is trying to update or so. facepalm.

Seah - December 2, 2015, 5:36 pm

Looks like a good NET for a free one. Doesn't seem bad at all. Wish it had a DDOS function.

NotRandom - December 2, 2015, 5:41 pm

So I have tried a bit more, in a fresh VM. And so far It has NOT connected to the same ip as before.

There is no difference between these 2 VM's, OS/Updates/software -

(Dec 2, 2015 06:33 PM)FordCI Wrote: [\[CITE\]](#) From what I see in that image, the process or service "vmnet-natd" is trying to connect to Windows servers. so what is "vmnet-natd"? if you google it, you will find that its a vmware process. gaudox both builder and stub are 100% clean. if anyone thinks that the file is infected or something like that, take a debugger and analyze it, the builder doesn't have anti-debugging/anti-vm, or use an online sandbox.

What you see is that VMWare or Windows is trying to update or so. facepalm.

Look, please try again. That is not windows.

vmnet-nat is not the vmware application, its the network card for my Virtual Windows machine, all traffic on that is from the VM only.

If you google the domain "nsatc.net" you will find some disturbing posts. If you whois nsatc.net you will see its not microsoft. I know precisely where and when my VM's downloads update from my WSUS, because i can see that in the firewall.

Im not saying its Gaudox, but this is the first time my VM tries to contact that domain.

MRProproduction1 - December 2, 2015, 11:25 pm

sorry for being really really dumb but i seem not be able to get it to work the keys are same as the panel no errors could you spend just few moments making tut on how use it and setup thank you

ok it seems i am not as dumb as i think installed hyper v on my server and got windows 7 vm installed it now added to list but is saying it offline when it on now hmmm and when vm restarts the bot ask user to start this must be due not haveing admin

ok bot go offline online and offline is this normal ?

Hello FordCl,i have asked you to make a writing tut about the set up,it will help someone out there.

Uiqueblhats - December 6, 2015, 7:58 am

I dont see now why people need to buy loader like andromeda when a free one above can offer these awesome features really best for herding and its FREE!!!!

Supreme.tm - December 6, 2015, 8:31 am

Thanks for this mate. Setting it up now.

Arccs - December 6, 2015, 9:32 am

nice man gonna check this out

Rob - December 6, 2015, 10:44 am

I've just had a little look at the panel and first of all I think you should consider adding some time to make the code a little better by changing to PDO statements for the database communication and away from any deprecated functions such as mysql_connect etc. You may also want to take a look at how the data gets added to the panel e.g in 'order.php' and to make sure that no one can manipulate anything.

excr4sh - December 6, 2015, 11:25 am

i think if u upload it on google drive (and ofc password on it) then its not gonna be marked by google

i heard about that u should try that :)

taco85 - December 8, 2015, 9:37 am

Just tested this bot and its fine but geo localization is broken for me. ITs unknown location.

xSublimation - December 8, 2015, 11:51 am

Works great but same here, i have an issue with location:

error log:

PHP Warning: mysql_query(): A link to the server could not be established in /home/public_html/gdx/utility.php on line 426

PHP Warning: mysql_query(): Access denied for user 'msxv***'@'localhost' (using password: NO) in /home/msxvdisz/public_html/gdx/utility.php on line 426

PHP Warning: mysql_query(): A link to the server could not be established in /home/public_html/i/gdx/utility.php on line 426

Panda-I_DoWn - December 8, 2015, 12:46 pm

Thanks for posting Good job bro :)

Green Goblin - December 8, 2015, 1:01 pm

Looks awesome, will any additions be added soon

????????? - December 8, 2015, 4:25 pm

Pretty awesome looking from what I see, but its certainly not out of the box setup. Im using 1.1.0.0 and the gdx/internal.php reference should be pointing to gdxintrnl.php, Im having to manually set the SQL_HOSTS/PASSWORD/KEY_SIZE in the php files, and it never created the Clients table. Is this just me? Cant get it working after all that so I stopped.

appcloud - December 9, 2015, 7:28 am

@ FordCI it's can support TOR , W10 and modules keylogger in future?

Uiqueblhats - December 9, 2015, 9:16 am

working totally awesome on proton host

excr4sh - December 9, 2015, 11:04 am

(Dec 7, 2015 03:26 PM)xSublimation Wrote: [\[CITE\]](#) Hey, how to add a hidden visit function, or maybe you'll add this feature on an update ? Need your help :)Ok, I will add it in new version.

It seems that it couldnt parse the Mysql Host, the configuration could be misconfigured.
There is a config file containing all settings make sure the host is there to.

Install it locally on xampp, copy the internal.php into the gdx folder.

I also noticed OP, that you use md5 for passwords.

Please can you switch it to a more secure hash in the future releases?

http://php.net/password_hash (bcrypt is a great algo)

5chn4pp - December 13, 2015, 4:41 am

I have it installed now, for some reason it did not create the file in gdx.

excr4sh - December 13, 2015, 8:09 am

Polymorphic Plague, did you solve it? I PMed you.

5chn4pp - December 13, 2015, 8:41 am

Yes, the loader works perfectly now! ?

x00u - December 13, 2015, 10:23 am

I'm using IIS 8 and MySQL workbench to set up the stuff and I have a few problems, LastLogin error like the Polymorphic guy had and once I set all of those to null login.php is blank, wtf do i do

Code Connecting...

Selecting database

Creating table (Clients)

Creating table (Tasks)

Creating table (TasksCompleted)

Creating table (Settings)

Creating table (Notifications)

Creating table (LoginTries)

Creating table (Admins)

Creating table (GeoIP)

Default values...

SQLSTATE[HY000]: General error: 1364 Field 'LastLogin' doesn't have a default value

Basically LastLogin, MaxLoginTries and PanelVersion give that error

Mavspammer - December 13, 2015, 7:40 pm

Yea, it is cool bro, a new botnet I can see

Parnassius - December 13, 2015, 7:57 pm

Using google API very very smart...

s3sS - December 14, 2015, 4:09 am

Hello excr4sh, nice job.

Just 2 things for me, geoip isn't working and I can't find the ip in csv.

Can we run client with NT AUTHORITY\SYSTEM account, seems to not working when i exec.

5chn4pp - December 14, 2015, 8:08 am

hello brother,

1st of all, i confirm that this is one of the cool bot which can be used for herding purpose....Now about the bug!! "excr4sh", i am getting the same geoip.csv error....I think, that file isn't loading properly....when i tested this bot with 10 test slaves, almost of all em' were popped up within 5 mins but none of them showed their location(or we can say "geo IP" here). Everything else is just awesome....in fact, i am planning to buy this if you provide a good paid version of it....Please PM me your skype id, (i already sent an invite @ ur jabber id but u seem to be offline there) i want to discuss regarding it with you.

Thanks,
weapon ?

(Dec 15, 2015 02:26 AM)PinkLlama Wrote: [\[CITE\]](#) Getting this set up now. Does this have the DDoS task?

I hope, you know the meaning of "Herder" ?

Furorem - December 15, 2015, 2:03 am

Im just curious are you making just "herder" for holding bots or are you gonna develop any usable plugins for monetizing? ;)

asad220678 - December 15, 2015, 2:05 am

Great work and thanks, let's try this one and find out if it can really get something out of latest browsers, seems quite able to do its task.

StayZoned - December 15, 2015, 4:46 am

This look's really interesting, I think this will be good for herding.

????II?? - December 15, 2015, 6:06 am

is this still working ?

btw thank you OP!

kuradox - December 15, 2015, 8:27 am

there is no download link , 1.1.0.1 ???

The Sly - December 15, 2015, 8:57 am

Big Vouch for excr4sh, this Botnet works like a charm and is super stable.

taco85 - December 15, 2015, 11:52 am

What else is copied from BB? i see atleast panel is took from it and edited. ?

Zyklon A - December 22, 2015, 12:44 am

(Dec 22, 2015 01:09 AM)t?b??iy Wrote: [\[CITE\]](#) What else is copied from BB? i see atleast panel is took from it and edited. ?

Why do everyone think that this is copied from BB. BB is not opensource and nobody except the owner has the code. He used bootstrap when he was designing the panel just like the betamonkey. A lot of websites use that and that doesnt mean that they are copy pasted.

As for the bot code, use a debugger and you will see that its not even remotly simillar to BB.

Furorem - December 22, 2015, 1:09 am

(Dec 22, 2015 01:44 AM)Zyklon A Wrote: [\[CITE\]](#) Why do everyone think that this is copied from BB. BB is not opensource and nobody except the owner has the code. As for the bot code, use a debugger and you will see that its not even remotly simillar to BB.Why

everyone thinks that atleast panel is copied from beta?

I explain why i think so: Panel outlook looks its copied from beta and just modified a little, deleted features from panel and renamed buttons.

Also theme is exactly same what is on Beta, everyone know that panel is easy to modify from php & css files.

I havent say that Builder is copied from beta, but also cracked Beta builder source is available. So for coder is not hard trick to build that builder what is on used with Gaudox from that Source?

Just need graphical work for that and delete features from it what is not used in Gaudox? Also Functions what Gaudox uses works 100% pefectly on cracked Beta, if i get explanation for that what im thinking and that explanation makes sense i accept it. Until that happens i just say that is copy from Beta.

And that is not bad because Beta was stable, and those are every botnet's main functions what need to work what is added on Gaudox. And Gaudox are completely free, so its not bad thing at all.

And those are just things what im thinking, not accusations or nothing just an ideas. Im curious to see what will be added and how this loader keep updating. Good upcoming Xmas for coder. ?

?

excr4sh - December 22, 2015, 3:58 am

Until that happens i just say that is copy from Beta.This part... so you're saying that I might be using the cracked BB builder source code in Gaudox builder? seriously? that is ridiculous, and it is more ridiculous when I read this

is not hard trick

Just need graphical work

If it's as simple as you say, why we have not seen other HTTP bots based on the cracked BB?

1) As I remember the author of cracked BB builder copied some functions directly from the disassembly, that menas you can try to find the assembly code in Gaudox builder to check if I used

the cracked BB builder source in it.

2) Did you know that BB panel is obfuscated with ioncube? How anyone can make copy-pasted if it's not even open source? even if you hook the PHP modules to get the decrypted code, ioncube erases variable names, function names, it's impossible to get the real code. besides that, who the hell would spend time trying to get the real code to make copy-pasted? do you think t's worth to spend weeks reconstruting the panel code to make copy-pasted?

3) You might not know but Bootstrap is used in many websites, check out:

<http://getbootstrap.com/components/>

(Dec 22, 2015 02:09 AM)t?b??iy Wrote: [\[CITE\]](#) And that is not bad because Beta was stable, and those are every botnet's main functions what need to work what is added on Gaudox. And Gaudox are completely free, so its not bad thing at all.

I can decrypt it and make the function names work and then you have a fully working code.

i4infoorg - December 24, 2015, 8:02 am

which file i need to share? how to use it?? i have set it up, what to do next?

Malthael - December 25, 2015, 8:24 pm

Thanks for this OP. This looks great!

Hi I just wanna know how to use the Download and Execute function on your loader.

What should I put on the command line section? Thanks and more power! :D

callmefemi - December 25, 2015, 10:06 pm

i need help with the setup.. i am a newbie.. if you can help please pm me your skype username or yahoomessenger YIM. thanks in advance for your help

does this botnet has a stealer??

i am new to this site and cant send a PM yet. please send me your skype id or YIM, i saw your PM man but i cant reply,

topkek1337 - December 26, 2015, 2:37 am

looks like the betabot botnet

midi123 - December 26, 2015, 5:24 am

This seems to be very interesting. A loader without dependencies is great. You should add more features, like: VNC backconnect, webinject, license key grabber, open hidden website, password grabbers and keylogger. Then your bot would be top notch and you can sell it. I would be your first customer.

Zombie [?] - December 26, 2015, 5:26 am

A free HTTP botnet with RING3? Wow. This is what I always wanted.

aesad - December 26, 2015, 10:01 am

If you are planning next update add DDoS Functions. L4 & L7.

Dris - December 26, 2015, 10:57 am

Another piece of trash, using a downloaded bootstrap template. You most likely stole half of this code and slapped it onto your bootstrap theme using their layout.

(Startbootstrap, Templates, Bare)

Please never breed with a female, ever.

Mcbride - December 26, 2015, 11:50 am

anyone find a suitable crypter for this though?

taco85 - December 26, 2015, 12:10 pm

(Dec 26, 2015 12:50 PM)Mr. Fix IT Wrote: [\[CITE\]](#) anyone find a suitable crypter for this though? Its native so all crypters without dependencies would be fine.

Here is my scan 0/57. I have used Snippy Crypter(never released for public i guess).

razorscanner.com / result.php?id=937516

Mcbride - December 26, 2015, 12:47 pm

Prism Lite will work with this I am pretty sure. I can do some testing if you want.

Will post the link to prism lite. <https://hackforums.net/showthread.php?tid=5078687>

Mad_Max - December 26, 2015, 8:28 pm

Good efforts by coder. I will pm to add my some features after discussion.

Sh4reef - December 27, 2015, 5:53 pm

I suggest you to disable the persistence function and the injection to bypass the runtime av's, or you can add an options for those functions.

raylano - December 28, 2015, 4:42 pm

look nice im think im going to try it keep it up !

xengie - December 28, 2015, 7:09 pm

thanks for posting the info.

DocK2014 - January 1, 2016, 11:53 am

First of all thank you for releasing Gaudox. I've tried it out and it works fine. Setup is done within a few moments.

Nevertheless I'm looking for a working crypter, too. I've tested Diverse Basic but it does not work :(Anyone has tested available ones with success?

KKK = Ku Klux Krunch - January 1, 2016, 1:55 pm

i say too basic, add more features than maybe people will buy it

hackkk - January 2, 2016, 1:01 am

Cool code, let me try is later! tks!

karpey - January 3, 2016, 8:48 am

hi gays sry for stupid question. But what write in this input, when i choose dowload and execute?
URL:

Command Line:

Expiration Date: (DD-MM-YYYY)

taco85 - January 4, 2016, 3:39 am

Hello i am lacking of user groups here. Can you improve this ? I mean admin ability to add users with privileges(access to tasks).

Second thing is adding build profiles to visible in panel. For example if im spreading 2 builds using different methods so i want to see how many bots i have for each file.

Lord.Baltimore - January 4, 2016, 7:43 am

It's possible to give the source code to people that planned to study it ?
It would be great and I will be very happy.

Thanks in advance

excr4sh - January 4, 2016, 2:16 pm

(Dec 27, 2015 06:53 PM)Sh4reef Wrote: [\[CITE\]](#) I suggest you to disable the persistence function and the injection to bypass the runtime av's, or you can add an options for those functions. The only way this bot could be detected is through memory scan (as happened with DarkComet, it's now even

detected by Windows Defender), but when that happens I'll update the project so don't worry, use a good crypter and it will not be detected.

(Jan 1, 2016 12:53 PM)Dock2014 Wrote: [\[CITE\]](#) First of all thank you for releasing Gaudox. I've tried it out and it works fine. Setup is done within a few moments.

Make panel work on php 5.6 What problems do you have with PHP 5.6? Thanks for the suggestions.

(Jan 5, 2016 12:35 AM)v4p3 Wrote: [\[CITE\]](#) The panel looks pretty nice to be honest, will you be updating the GUI to look more sleek or will you keep it simple? Well, since the UI is not a priority, I would focus my time on the bot and panel, but yes, I will update it at some point.

asmy - January 5, 2016, 4:18 am

good to see hf still producing some good programs.

pafke - January 5, 2016, 4:34 am

I couldn't log in at all, chapta was broken/invisible

excr4sh - January 5, 2016, 6:18 am

(Jan 5, 2016 05:34 AM)pafke Wrote: [\[CITE\]](#) I couldn't log in at all, chapta was broken/invisible it may be that your hosting lacks the GD library. I didn't mention about it because it is almost always installed.

To verify that you have this library installed check the PHP info or run this script (copy the text and save it as .php):

```
Code <?php
if (extension_loaded("gd") && function_exists("gd_info"))
    echo "GD library is installed";
else
    echo "GD library is not installed";
?>If it is not installed, you will need to contact your hosting provider, or are you running it on a VPS?
```

Thanks, I will add a sanity check to the setup script.

pafke - January 5, 2016, 6:57 am

the Download and Excute is not working at all
All functions in this botnet works like a charm. Just learn how to use this.

nustyle - January 21, 2016, 9:29 am

Can confirm that - Download and Execute works excellent...most probably you just use the wrong parameters.

Task Name = Any name so you can identify it yourself...
URL = Full URL (download has to start immediately)...
Command Line = The command to start whatever the download is...e.g. if the download file is "example.exe" command is example.exe ...isn't that difficult ;)

DevNet - January 21, 2016, 12:29 pm

Looks like a nice bot, sucks that it isn't open source at the moment though.

Minotaure - January 22, 2016, 12:58 am

yes, i have test, Download & executed is good,
Web panel is basic version, i like design thanks for share!

chescos - January 27, 2016, 7:12 am

Can anyone recommend a hoster to use it on?

excr4sh - January 27, 2016, 7:58 am

be careful, I read that someone is trying to sell this loader. gaudox is free.

istalefire - January 27, 2016, 11:38 am

Thanks for posting this man :D
I use with lws vps.

Hoody - January 27, 2016, 9:56 pm

Just a suggestion, I myself happen to be colorblind and the map colors for 0-50 and 201-500 look exactly the same to me.. lol. Maybe use a blue or something? idk.

DangerZone90 - January 27, 2016, 10:41 pm

(Oct 15, 2015 06:17 AM)excr4sh Wrote: [\[CITE\]](#) Don't ask me what crypters to use, I cannot give feedback for any crypter as I have never bought one. If you find a native crypter, ask the developer if his crypter is compatible with Gaudox. don't use crypters with dependencies. I will code a native crypter soon.

Gaudox HTTP

Gaudox is a HTTP loader completely coded from scratch in C/C++ language with a few lines of Assembly, which means that it does not require of any dependencies (C-Runtime, NET Framework, Java VM). The bot has been fully tested and working on all Windows versions from Windows XP SP2 to Windows 10 (32/64-bit). It is also worth mentioning that I coded this bot with very efficient and stable designed code to handle thousands of connections at once.

Features:

Usermode Rootkit

Bot has Rootkit functionality which hides all bot resources and prevents from being accessed from explorer process. This feature does not drop any to disk, the code is internally embedded in the bot file and injected in the target process from memory. It is also has self-protection that prevents the hooks from being removed by third-party programs or any security tool. This feature is currently working on 32-bit systems.

Persistence/Watchdog

Bot prevents it from being removed from the system by bot killers, security tools or user actions. This feature is currently supporting process protection and working on both 32/64-bit systems but its maximum compatibility is in 32-bit.

Traffic Encrypted

The communication between the bot and the control panel is obfuscated. This prevents middle attacks.

Anti-Analysis/Research

Bot contains several methods for preventing from being analyzed by researchers or unauthorized users. some methods are from preventing static analysis by obfuscating code, data up to detect the presence of debuggers, avoid running the bot in virtualized environments, etc. some methods may not be mentioned.

Commands:

- [+] Download and execute (Drop&Exec)
- [+] Visit Website (Visible)
- [+] Update Client
- [+] Uninstall Client

Panel

SHA-1: DE5BD976FB5A4B50D8C8739E6B9F286F5B1A4798

1.1.0.1.rar
MD5: F99A3FBDEB1B0CD12BB1E6ED700ADE90
SHA-1: A00A2B6D6C5806C75C5551073283D1218AC017C8

Mirror
Code <https://www.sendspace.com/file/luu8mz>
Password:
Code 58C1DC678A0B816AAB7E569F70E2E40A
How to install:

- 1) Open the Builder and create a new profile, you will use these values KEY #1 and KEY #2 in the panel.
- 2) Create a new database (recommended)
- 2) Open setup.php with browser and complete the form.
- 3) Delete setup.php and open login.php with browser.
- 5) When creating the bot clients do not forget to use the same profile you used to install the panel, otherwise the bots will not connect to the panel.

Notes:

- 1) I highly recommend disabling strict mode in MySQL.
- 2) If you test the bot from a local server, the panel may be showing "US" in location, it's not an error, the panel expects to always get an external IP.

Tut by Jar1: <https://hackforums.net/showthread.php?tid=5084324>

How to update:

1.1.0.0 to 1.1.0.1+

You will need to install the panel again, sorry for the inconvenience. The database is now the final version and it would be compatible with all future versions (I hope, unless I have forgotten something or want to add a new feature, in any case I will code a script to update the database).

Changelog:

Spoiler ([Click to View](#))

1.1.0.1 (15-12-2015)

Code Bot

- * Fixed issue with Uninstall command
- * Anti-Virtual machine methods have been enabled

Panel

- * Fixed issue with location
- * Added captcha in login page

1.1.0.0 (30-11-2015)

Code Bot

- * Implemented Ring3 Rootkit for 32-bit versions of Windows
- * Implemented Watchdog/Persistence to prevent from being removed
- * Communication between the bot and the control panel is now encrypted
- * Anti-Analysis/Researching methods added
- * Core improved

Panel

* Panel completely recoded and using PDO extension which means it's more secure against SQL injections and other attacks.

* Improved the appearance of the panel, images for countries were added, ability to change password, etc.

1.0.0.0 (15-10-2015)

Code * First release

wow for a public bot dammmmm A+ man, you code that yourself or ?

Solomon Grundy - January 27, 2016, 11:35 pm

i like this loader.....so awesome ?

excr4sh - January 28, 2016, 9:56 pm

(Jan 27, 2016 10:56 PM)Hoody Wrote: [\[CITE\]](#) Just a suggestion, I myself happen to be colorblind and the map colors for 0-50 and 201-500 look exactly the same to me.. lol. Maybe use a blue or something? idk.weird... not sure what problems you have. I just tested the function responsible for creating the colors and it worked as expected

also, the panel is open source and you can modify the colors as you want. In gdx.php:

```
line 171 (1-50)
line 175 (51-200)
line 179 (201-500)
line 183 (501-1000)
line 187 (1001-5000)
line 191 (5000+)
```

```
$RGBColor = YOUR_COLOR;
```

replace "YOUR_COLOR" with the color of your choice, it should be in RGB format:

majkidx - January 29, 2016, 6:37 am

When exactly will you code a native crypter?

Lryzx44 - January 29, 2016, 8:48 am

What has it to anything for functions ?? but looks otherwise quite good

nustyle - January 30, 2016, 7:14 am

(Jan 29, 2016 07:37 AM)majkidx Wrote: [\[CITE\]](#) When exactly will you code a native crypter?

He wrote he will code it soon...that's enough info, isn't it? OP already published a bot for free which is a great share so just spend some bucks on a crypter if you cannot wait ;) There are enough available ones...

Last but not least I'd like to suggest adding a feature to choose between x64 and x86 clients when creating a task. That'll be helpful I think. Or some kind of select feature so that admins do not need to copy client IDs by hand :)

excr4sh - January 30, 2016, 11:45 am

v4p3 - February 6, 2016, 5:03 am

Thanks for the HTTP Bot OP, design looks good & it's free :)

Gigabot - February 7, 2016, 2:21 am

Why does my panel password not work all of the sudden once i had like 50ish bots?
Backdoor ked?

nustyle - February 7, 2016, 5:21 am

Hey Lord Ninja, cannot confirm that. I have two installs up, each with at least 100 clients up in 24h. My PW still works without problems! If you have access to the host service just reinstall the panel at the same location and set a new PW - clients should connect again within the knock time you set as long as you use the same keys :)

SH4D0WS_ - February 7, 2016, 10:04 am

When I'm setting up the botnet on XAMPP it keeps giving me this error:
Connecting...
could not find driver

What do I have to do?

Gigabot - February 7, 2016, 2:22 pm

(Feb 7, 2016 06:21 AM)nustyle Wrote: [\[CITE\]](#) Hey Lord Ninja, cannot confirm that. I have two installs up, each with at least 100 clients up in 24h. My PW still works without problems! inferno.c - February 9, 2016, 10:44 am

Nice free botnet. Thanks :)

fq23533 - February 9, 2016, 11:07 am

Nice!!!!!!

Which knock rate?

nustyle - February 9, 2016, 12:15 pm

(Feb 9, 2016 12:07 PM)fq23533 Wrote: [\[CITE\]](#) Which knock rate?

You can choose when using the builder and you can change it at the panel.

@OP: Any known issues when creating a task for a group of clients? Just created some for a selection of ~50 clients (using their IDs) and it seems like the process is much slower than sending tasks to all.

fq23533 - February 9, 2016, 3:56 pm

(Feb 9, 2016 01:15 PM)nustyle Wrote: [\[CITE\]](#) You can choose when using the builder and you can change it at the panel.

Interested knock with exploit kit

Which %

jhonmathew0 - February 10, 2016, 1:43 am

Awesome one..!!! Really i used it .. and its awesome.. All functions are working perfect ... just uninstall option is not working properly i guess.. :(

But still i vouch for you brother.. Really nice one :)

xescript - February 10, 2016, 2:04 am

Don't use this, the RAR File is infected with his stub. <http://prntscr.com/a0nktl> !! You're welcome :)

xcite - February 10, 2016, 7:33 am

ok bro, i got everything setup, now I want to know what to fill in the Command Line if I want to execute a url that just been downloaded. I want to execute the file that it's just downloaded.

Hope it's simple for you to understand.

Thanks.

nustyle - February 11, 2016, 2:14 am

IMO choose "Download & Execute", enter the URL but do not enter any command if you only wish to download the file.

5chn4pp - February 11, 2016, 6:56 am

(Feb 10, 2016 03:04 AM)xescript Wrote: [\[CITE\]](#) Don't use this, the RAR File is infected with his stub. <http://prntscr.com/aOnktl> !! You're welcome :)
i dont think so, but if you are so sure, let me check.

nustyle - February 12, 2016, 5:15 pm

I have used the newest version more than once and I have still two different builds of it up and running - never noticed a dropping nor a knock to any host I do not know. Making it short I cannot confirm an infection after extracting the RAR. Imo that screen by xescript is no proof. If it should be true it should be no problem for you to deliver any real proof @xescript

v4p3 - February 15, 2016, 2:37 am

I've noticed a lot of people saying this is infected, this tool isn't infected, it's detected maybe you should actually take a look at the binary file and test it properly before posting saying "Don't use it, it's backdoored."

If you want the stub to be FUD then crypt it, if not and you lose your slaves either it's been detected or you haven't set something up right, so learn how to do it properly.

ToxicBox - February 15, 2016, 7:47 am

thanks for the sharing, the botnet often you have to pay!!

BobDarling - February 15, 2016, 10:24 am

This bot is exceptionnal for a free release !

Gaudox project is closed. If someone wants to share the download link (don't forget to check the hashes), do it, no problem. The thread will remain open for historical purposes. I might bring a new version in the future, or may never do so.

column - February 24, 2016, 7:09 pm

This looks like it would be great for a first botnet and easy to setup, why close it only after 4 months though?

Goldmouth - February 25, 2016, 4:31 am

Could someone share the link and pass?

Gigabot - February 25, 2016, 6:43 am

It never had. Stop shit posting.

Man up and use a VM

That sounds good and thanks for sharing.?

I wanna this project but i can't find this.?

Please help me to download.?

Tip: Don't make an account to just get this. OP won't give it to you most likely.

Goldmouth - February 29, 2016, 10:42 am

Its not hard to find. I found it in hours.
