Thread: [Pro LSD Tripper Bineural Beat/Pavlovian Userscript \[TRIP BALLS IN 20 MINUTES WITH JS\]](#)

RogueSYN - October 16, 2015, 1:51 am

Hey HF, this is my first post here, I was doing some javascript coding, and then I thought of bineural beats, then I found out onlinetonegenerator.com uses javascript. Game on.

After my use of bineural beats I knew it takes 30 seconds for your brainwaves to synchronize with the tone

I also knew that to make a bineural wave all you have to do is take any amound of herts for the first oscillator and add 3 to the same amound of hertz you put for the first to the second and play those both at the same time and you have a perfect bineural wave.

I decided to try and use the pavlovian effect (google it) to try and change the way the brain works to alter the way it reacts to certain colours (AKA: associating a 534hz brainwave with the colour red), I havent found a site it works on yet but this could be very dangerous because the pavlovian effect can last up to THREE WEEKS. If anyone manages to reprogram this with the pavlovian effect or finds a site that it works on, post it please.

Anyway here is the userscript: [pastebin\(d0t\)com/sCXWXc2m](#)

It works by tricking your brain to shift its brainwaves every 30 seconds. If you are epileptic or suffer from a severe mental illness you should not try this. ?

Have a nice trip guys ?

NOTE: If you dont have greasemonkey and your lazy as fuck just use CTRL+SHIFT+K to open the javascript console. Just paste it in and press enter
