Thread: [Help: how to hack into camera system/detect camera](#)

YeezusAlways7 - October 20, 2015, 11:27 am

Any tutorial on how to catch signal from cameras or check if there are any cameras?

datguy.dev - October 20, 2015, 6:08 pm

Hint: Look at cameras or other equipment to get brand or models. Read the manual and search for exploits. Hope it has an IP. Connect to network... If your just looking for random targets than Shodan.

YeezusAlways7 - October 20, 2015, 11:33 pm

If i dont know if there are any cameras, can i detect them somehow? Signals from them?

I'm not in the business of mentoring. You have some a lot of homework to do.

Just know, most networks worth looking into, don't have IP cameras on the same segment as other traffic. There are ways of getting information that doesn't involve sitting at a computer as well.

Drug Addict - October 22, 2015, 7:57 pm

This information isn't posted publicly as far as I am concerned

lebouskii - November 21, 2015, 9:05 am

I live by a business and they have over 12 cameras. I spent about 8 minutes cracking their password lol. Thier network has ALLLLL kinds of shit on it their whole camera infrastructure. so i get to view all the cameras when i want. i get to see everything close to transactions, employees. all his business records. i found credit card infomation but it was not readable and gobbily gook to say. you can even talk through the cameras to the people you see. and move them . zoom in and out.

SOSA_ - November 21, 2015, 9:16 am

Go to business

Look at Camera make and model

Scan network

Find camera IP (If it has one, it should but not if it's CCTV)

Look for exploit online (If none skip to B:)

Connect to camera's router

Run exploit

B:

Look for default admin credentials

Connect to Cameras router

Login
