Thread: [Need Some help - Remote hacking, Possible Remote Buffer Overflow ?](#)

Mr_Plmpdaddy - October 21, 2015, 12:55 am

Hey guys, last night i got a google 2step verification text on my phone
Long story short ... Someone got 2 of my accounts and tried for the 3rd.

All accounts have been recovered and now i am plotting my revenge.

I have IP of Victim and all open ports on his Box
I can DDOS, but he would not know why
Looking to Hax his box and teach Him a lesson.

All telnet Connections are denied Bcause of invalid user

173.240.XX.XXX is responding on port 23 (telnet).
173.240.XX.XXX is responding on port 25 (smtp).
173.240.XX.XXX is responding on port 110 (pop3).
173.240.XX.XXX is responding on port 119 (nntp).
173.240.XX.XXX is responding on port 135 (epmap).
173.240.XX.XXX is responding on port 139 (netbios-ssn).
173.240.XX.XXX is responding on port 445 (microsoft-ds).
173.240.XX.XXX is responding on port 808 (omirr).
173.240.XX.XXX is responding on port 1080 (socks).
173.240.XX.XXX is responding on port 2121 (scientia-ssdb).
173.240.XX.XXX is responding on port 3389 (ms-wbt-server).

Location: Palm Beach Gardens, FL, USA
Browser: Firefox 41.0

I am not looking for a personal army , just looking for pentesting advice.
Maby you can see something i cant

As always
THANK YOU for your time
?
