Thread: [Usb copier to get phone data](#)

sleepless000 - October 22, 2015, 7:34 am

Hi there folks,

Just wondering if this is possible:

I got a secret usb copier, it means that any usb drive/card I connect to my laptop is fastly and secretly copied to my hard drive, that inclues android phones I guess.

I also suppose that the pictures of the phone will be copied but what i really need is to get FB messenger data, means the conversations...

is that possible????

thank you very much for your help, my daughter is becoming of age and it's been a hard time checking the kind of person that's around her...

If all the data is automatically saved on your HDD, then yes, it's possible.
Just analyze the saved data, messenger should be somewhere there.

What I want to do, and I don't know it it's possible, is to copy the whole phone to the pc silently, and then browse for the facebook's messenger cache

I don't know it is possible or even if the facebook messenger has a cash on the phone, please help me out

thanks

Can you not make the whole Phone Create a backup of itself on your PC with the AutoPlay feature in windows?

Checkmark - October 22, 2015, 3:31 pm

Yes this is possible if you find the right program and have a huge amount of memory on your USB. Chumlee has a few very nice stealers here: <https://hackforums.net/showthread.php?tid=4677455>
