Thread: [\[TUTORIAL\] How to Use Luminosity Link's RDP Feature](#)

Savage Squad - October 22, 2015, 9:00 pm

1. Download proxifier
2. Do reverse proxy on the bot.
3. Setup RDP on the bot.
4. Connect on proxifier.
5. Load up RDC on your pc. (Remote Desktop Connection)
6. Type in 127.0.0.2
7. Enjoy :)

You're bots must be on 1.4 not 1.3.1.

You still use 127.0.0.1 to connect on proxifier.

You need to use Itself injection with crypters or else it will not work because it cannot elevate the process :)

KFC Watermelon - October 22, 2015, 9:11 pm

This is a perfect and down-to-earth guide. Also you may use 2X RDP. It's a bit confusing at first, but once you do it once it's extremely easy.

Oh, and this isn't a replacement for Remote Desktop. This allows you to control a silent, separate user session on your clients and run installed programs and files.

Mateey - October 22, 2015, 9:12 pm

You should include that you need to use Itself injection with crypters or else it will not work because it cannot elevate the process :)

Im not 100% sure on this.

Have you tested?

This is true, for PCs that do not have admin access.

Ur welcome m80.

More HQness where that came from.

QU?CKSILVER - *October 23, 2015, 1:39 pm*

You should include how to setup Proxifier to connect to the LL's Reverse Proxy server (127.0.0.1:port) as well. There are lots of people who don't know how to.

Mr J Smith - *October 23, 2015, 3:13 pm*

OMG aha, I thought you had to login to their router page using proxifier and then forward the port, turns out you can just open a socks port and tunnel the traffic through proxifier? Wtf...

I can essentially open a hidden VNC on any of my clients now?

Note that this is not Hidden VNC, and yes, it's all tunnelled through your victim's proxy server, which you can use on your side. No need to portforward

richi - *July 9, 2016, 8:40 pm*

Please can anyone upload a video on how to do this RDP stuff of a thing..

I have tried all the lesson but stell not working on my side..

I am using nvpn.net for my port forwarding

Thanks mate

Shadow4133 - *July 10, 2016, 4:35 am*

Thanks for this tutorial, helped me a lot

BeastModeC - *October 11, 2016, 2:00 pm*

Are their any apps beside proxifier that we can use since this is a paid program and only has a free trial period.

Anyone else ever get "Error installing RDP: invalid file download" error? I never had issue using this feature but now I get this error
