Thread: [Web-Stresser Stop Button](#)

KyFu - October 24, 2015, 7:30 am

I am currently configuring a Network Stresser and the only thing I need it so configure a stop button for attacks. Any help?

Thanks in advance!

you mean api or hub ?

lets me know if sir

Vigor - October 24, 2015, 10:10 am

I feel like if you knew anything about actually creating a network stresser then this would be pretty elementary... that's just me though.

Knowledgeable - October 24, 2015, 1:17 pm

are you meaning u need this for ur api or for your source itself?

Supreme_ - October 24, 2015, 1:19 pm

do the same as you are doing to initiate the attack, just stop it, send a ctrl+c

```
case "stop":
    $response['response'] = shell_exec("sudo pkill -f " . $proc);
    $response['message'] = "SUCCESS Attack stopped to " . $target . ":" . $_GET['port'];
    $response['success'] = true;
```

```

Suprème, You are definitely amazing. Thank you!
