Thread: [Why guyz ask for Manufacturer Model Number Mac Address SSID Serial Number to crackwpa](#)

CyberError - October 25, 2015, 4:05 am

Why guyz ask for Manufacturer,Model Number,Mac Address,SSID,Serial Number,ISP...etc to crack Wpa handshake,,

how this help him to crack better

Thanks
Regard
Sahil?

Siktah - October 25, 2015, 4:25 am

Because some routers and ISPs have default passphrases or known passphrase limits. It narrows down the hunt and enables faster hacking. Not all hacking is pressing a button and waiting.

Mad76e - October 25, 2015, 6:09 am

Because of this...

<https://hackforums.net/showthread.php?tid=5000767>

Or to be more exact

About Injection frames

In a perfect world there will be programmers and devs that write drivers for every kind of wireless adapters out there, but that's seldom the case, nor do they develop drivers that supports injection frames, and that's what we need for hacking. Why is injection such a big deal? It's because we're telling the wireless card to preform something it's not made to do.. To lie, to forge, to steal, just to tell something about what injection might do. As I said it's not all wireless cards that hardware nor software support this... Sadly

Also depending on router and firmware, it can be vulnerable against some kind of attacks

thanks mate ???

ok but if there someone who explain more better and in detail

Siktah - October 27, 2015, 4:24 am

No. Just read it. It's pretty much everything you need to know.

xyz- - October 27, 2015, 4:27 am

"In more detail" he said it perfectly

Sorry for the argument ...but its not what I want to know.....

Mad76e - *October 27, 2015, 10:12 am*

Sorry for me beeing an arse, but what exactly do you want to know? You can't be more clear. You want to know things like flags etc, indepth RE drivers and such? In that case I promise that you won't find your anwsers here

PinkPanther - *October 27, 2015, 11:19 am*

I helps the cracker narrow down his wordlists. Information gathering is the first thing any hacker learns. It's common knowledge that many ATT customer routers have passwords that are 10 digit numerical. Other routers have a wpa password derived from their mac address, serial number, or a combination of the two.

That is why they want to know.
