Thread: [ACCOUNT GENERATOR SCRIPT \(YOUR OWN GENERATOR SITE\) {netfix, spotify, origin} +TUT!](#)

raid0 - October 25, 2015, 2:13 pm

Ever wanted to make your own account generator?

You had accounts for it but just didn't have a generator?

Well then your problem is solved:

Here is a free php account generator, you can edit the script/source and add more account types, at the moment it has 3 different account types.

Screenshots:

Spoiler ([Click to View](#))

Download:

Spoiler ([Click to View](#))

https://mega.nz/#!HhsB1RaA!AI53L0etsPL_vn1iNewrldoZr2pXO7r7YhSE2qgr76s

Css help:

Spoiler ([Click to View](#))CHANGE BACKGROUND + BOX SHADOW

In the css folder you'll find the file "style.css". Click that.

Then you scroll down a tiny bit and see

Code:

```
body{
```

```
    background:#F7DA55;
```

Change that to whatever color you want.

Below that code is something like

Code:

```
box-shadow: rgba(243, 208, 39, 0.33) 1px 1px,  
            rgba(243, 208, 39, 0.33) 2px 2px,  
            rgba(243, 208, 39, 0.33) 3px 3px,  
            rgba(243, 208, 39, 0.33) 4px 4px,  
            rgba(243, 208, 39, 0.33) 5px 5px,  
            rgba(243, 208, 39, 0.33) 6px 6px,  
            rgba(243, 208, 39, 0.33) 7px 7px,  
            rgba(243, 208, 39, 0.33) 8px 8px,
```

rgba(243, 208, 39, 0.33) 9px 9px,

rgba(243, 208, 39, 0.33) 10px 10px,

You'll want to select all of those lines and copy it. (There are more below that list also. Just keep scrolling!)

For short, you can copy the entire code.

(You should probably select a darker color for this one because this is your box's shadow.)

You can change the colors all at once by pasting the code in a Google Text Document. Then press CTRL + H. Replace

Code:

243, 208, 39

with whatever color code you want basically.

Copy the new code and replace it with the old code.

If you only select one of those lists to change the color, it may not work. So don't forget all of them!

How to add accounts??:

Spoiler ([Click to View](#)) This applies for any folder (Netflix, Spotify, Origin) in your file manager.

Open the file "9908131231.txt"

Replace all those lines with your account list.

Make sure only 1 account is on each line!

You can change the name of the file if you wish.

If you change the file name, don't forget to go into "gen.php" and change it in there too.

You'll see

Code:

```
$file = "9908131231.txt";
```

Change that to whatever you named your text file. Don't forget the extension!

It took me some time to write this tut, give me some feedback please :)

This is a really nice giveaway, glad to see some HQ posts on HF today aswell. Great work OP!

Mcbride - October 25, 2015, 2:16 pm

Well done Flopsie. Good thing you're doing here.

+Haze - October 25, 2015, 7:13 pm

Only thing is that storing accounts in a .txt file is not considered best practice. There's that possibility that someone can find the directory and steal all your accounts. You might want to use a database.

You might want to use a database.that's true actually... didn't even think of that! but i don't have any experience with databases, so you'll have to do it yourself

M1L1 - October 26, 2015, 1:24 am

And why not encrypt the file? It's a simple option. ?

raid0 - October 26, 2015, 9:38 am

thats nice :o did you use my source?

-zERaIT - October 27, 2015, 11:21 am

no offense but this shit is all over the internet. if this took you 2 hours to write then you might have smoked something very shitty while dong so.

widget62 - November 21, 2016, 2:51 pm

Thank's you it's very cool super :)

Thanks for bringing up a year old thread, undoubtedly, this is not maintained and the accounts does not work anymore.

spiker2017 - January 12, 2017, 6:01 am

are there anymore generators that are up to date?

Bluffer - January 14, 2017, 1:22 am

(Jan 12, 2017 07:01 AM)spiker2017 Wrote: [\[CITE\]](#) are there anymore generators that are up to date? mine is but isnt.

less sales = less updates so people think its dead but will relaunch it soon.

i don't want to get in trouble so pm me if you want the link but you should know it if you know account generators.

DataBuster - January 20, 2017, 2:39 pm

Nice thread, nice gen, only thing is that it's free. Good for personal use tho.

abirkohen12 - April 14, 2019, 6:18 am

i want a help its not working to i dont know what to do

My advice is that you first learn to correctly use a search engine (filtering by date, especially when looking for updated technologies)
