Thread: [\[TUTORIAL\] 01000101's Hijacker \[How to make Anti Sandboxie,AV,firewall,etc...\]](#)

kmz22222 - October 27, 2015, 2:40 pm

Wassup back with another tut.

The program goes to the maker of it 01000101 [Note: The maker of it actually is 01000101's friend not exactly him as he mentioned in his thread]

Also note this is posted at :

Current time: 10-27-2015, 01:25 PM

Any other tut like this is probably a copy of my thread.

=====

Original thread for downloading and other stuff:

<https://hackforums.net/showthread.php?tid=5035830>

If you can change the exe to a .bat and give me the coding of the program that would be cool!

Dafuq is a hijacker?

It's a charm thingy that makes a program excute another program

LEMME EXPLAIN FURTHER

its about making a program open other program instead of itself

LEMME EXPLAIN FURTHER

for ex: i want to "Hijack" Notepad to make it open CALC

so i do: Hijacker /i notepad.exe C:\Windows\System32\calc.exe

after that if i opened notepad it will open the calculater instead of notepad

Hope that was explained well.

HOW TO OPEN HIJACKER?

Download the program from the original thread as i mentioned it up.

then it depends on "Name Of Your PC"

OFC You know how to open CMD?

Just type cmd in windows search and then press enter.

after that you will type the following secret code[not really a secret]:

CD C:\Users\YOUR PC NAME\Desktop

then press enter.

at your pc name type ur pc name. to know it just press windows icon then look at the icon/profile picture under it will be the name.

[You should have put the hijacker at the desktop in order for this to work.]

Extreme note: This might change your CMD Directory Permanently. to change it back to anything else just type CD followed by the location.

So you may need only to type that secret code once not twice.

Then type the name of the program, Hijacker v0.2

it should work. trust me.

#MindFucked ?

How to make Anti-Sandboxie Bat Virus:

Open hijacker then type:

Hijacker /i Sandboxie.exe C:\Windows\System32\calc.exe

press enter and viola when u open sandboxie it will open calculator

Gratz you just anti sandboxie your self

[/u]How to use this on other?

Kinda hard tho. but if you have a mind you should be able to do it.

i prefer making a BAT code

and a copy of the hijacker

but the victim must put the hijacker in the same location u typed the code of, otherwise it won't open hijacker and that will be a fail.

And then he open the BAT virus and viola.

This is a sample of how it may works on other people.

But if you are a programmer this should be extremely easliy for you as simple as making a code to inject it into the program to make it an anti sandboxie.

BUT You can't do this[u]

You know why? because you don't have the coding of the program once you have it it's easy to do it on others.

This is why i asked for the coding of the program.

[The code which used to make the hijacker]

Thanks for reading.

Feedback with a simple reply down [it doesn't take alot trust me.]

VVVVVVVVVVVVVVVVVVVVVVVVVVVVVVV

Holy ... The underline thingy fucked up sorry for that guys.

I explained things in further so people could know more.

Yep the info is there! thanks for your feedback & thanks for sharing the hijacker with us. ?

Glad you explained certain parts I might've missed. It's my pleasure to share it, it deserves some attention.

Sorry for bumping a kinda old thread, but the problem with this tool (I found out) is that it only works on the pc you are on. So basically it doesn't help for making Virusses or stuff like that.

crezybrain - November 17, 2015, 8:40 pm

good stuff i have learn it

ur r wrong

it can work but i need to provide the hijacker in the victim's computer.
