Vintel - October 27, 2015, 4:44 pm

I'm starting a new product line (mainly malware) and I need a name for this product line.

Please post your ideas in this thread and once I see one that I like I will pay the user \$5 in Bitcoins.

MalwareVintel? MalVintel?Kind of. Depends on the type of products.

I'm not only going to make malware products so something including Malware does not fit.

Is your line a series of tools like Blackshades? or is it a rootkit with a fake AV name? Need to know what type of name your looking for.
