Thread: [CS:GO Mic Not working](#)

Purest. - October 28, 2015, 6:17 am

Hi guys,

I just got a new pair of headsets g430 from logitech, but in csgo the voice dosent work at all, except the voice only comes for around half a second and rest is no sound, the headset works fine everywhere, skype etc. even steam recording device setting test it works FINE. It does not work at all in csgo, I have a blue snowball which dosen't work either, can someone please help me out, I have so far:

Plugged and re plugged sound card (my mobo audio port's broken so can only use usb mic)

Re-installed csgo

installed all drivers and updated firmware,

Please can someone help me out as I cannot communicate in csgo matchmaking

Thanks alot! ?

pissedaf - October 28, 2015, 11:12 am

bump for my boy here.

I cannot help, I have no knowledge

hope someone can do this for you

Uriel Septim - October 28, 2015, 12:20 pm

Sup,

Can you activate your CSGO console and relaunch the game

Usually, when my mic is unplug i got this message :

"Unable to initialize DirectSoundCapture. You won't be able to speak to other players."

D'you have it ?

Alright, open Steam, click on the Steam text in the upper-left corner, go to settings, and then Voice. Make sure the "Recording (audio input) device is the correct device you are using for your microphone audio, if not, click the "Change device..." next to it, and click on your microphone and use it as standard

EDIT: Nevermind, didn't notice that it worked in steam, right click on CS:GO in your library, go to properties, Local Files, then browse local files, then open the cfg folder, then go into the config.cfg file, find the voice_mixer_mute and make sure it's 0.

Then find the voice_mixer_volume and make sure it's the correct value. (The one you use in

Windows)

the mute is 0

how do u know what is windows value?

The value you have when you click on sound devices and double click your microphone.

Have you selected your mic here?

Lithe - November 6, 2015, 2:09 pm

My mic isn't working at all either. No clue why but some guy told me it had to do with my Nvidia card?

Purest. - November 6, 2015, 10:26 pm

I have an nvidia card too, can someone put some light on this issue??

LostInTranslation - November 8, 2015, 1:21 pm

OP,

I once had this problem it's an easy fix.

First right click your volume button at the bottom right of your screen.

Second click Recording Devices.

Third make sure the mic you choose is set as default then try and setup mic in game.

(If this doesn't work disable all other recording devices besides the one you want to work on CS)

Fixed my problem and many of my friends hopefully it helps you! :)

no bro, its already like that.

Purest. - November 12, 2015, 8:35 pm

The mic voice comes if u hold down the trigger button tho, is it always like that?
