How much can the ddos protection handle? ?

(Oct 30, 2015 08:30 AM)Sin???? Wrote: [\[CITE\]](#) How much can the ddos protection handle? ?

Ddos protected locations are ovh servers so theoretically up to 480 gb/s. At least that is what ovh declares. US locations have also ddos protection capable to hold up to 20 gb/s per second. Rest locations have 1 gb/s network.

UPDATE 31-10-2015!

-Added Poland (PL) and Russia (RU) locations.

-Restored Singapore location.

RockBeltHostLTD - October 31, 2015, 10:03 am

Just added 2 new location (Poland (PL), Russia (RU)).

Also restored Singapore location. So since now we have 18 locations.

Also im glad to announce you that in november we will release custom client with portforwarding and tcp protocol.

Please take a note that as soon as custom client gets released we will raise the price. So buy now when it is cheap ?

How can you still say you do not log?:pSimply. Im citizen of Russia federation and goverment of other countries cant do anything to me so I dont really care about their stupid laws. Also EU retention law apiles only to ISP not to VPN providers. And the only thing isp can see is Encrypted traffic that is useless for them. Altrough for better security with "darker" actions I recommend our Asia or Russia locations. I hope that cleared the situation.

Just topped up by another 3 months. Been using this quite a while now, and never had any issues with it.

Going through Paypal, it went into Russian for first payment screen til I logged in, but once in it corrected. Some might find it confusing so you may want to look into that.

Otherwise an excellent VPN, and highly recommended.

Hopefully price rises won't be too much if and when.

Keep up the good work.

I -1 this sales thread. I DO NOT recommend this to anybody looking to buy a Vpn. My account does not work and I have brought his up through pm, support email, and here on this sales thread. The last email I received from support stated that the issue was forwarded to the billing department and a response would be given in a Maximum of 24 hours. It's been 3 days since I got that last email. Fix your service op. Until these issues are addressed and the op can act in a more professional matter I recommend ra4wvpn. Their service was instant unlike op.

The only servers that are down at the moment are Hong Kong and Sweden due to legal troubles. We are working on fixing it.

DDOSFrance is down for some users and online for some users. It is due to it being ddosed. Rest servers are online.

I dont know how 3/18 are half but ok whatever.

Per your request i added to thread information about them being offline.

Just recently got my account activated and I am using Tunnelblick to connect to the servers. Do I use the login information that I use for Dissemble.me?

deadthings - February 13, 2016, 7:34 am

I had some big problems with US servers last night (13th). Speeds on various tests were less than 2 megs and at times well below 1 meg, and tried loads of different speed testers and things like Netflix wouldn't run. Resolving urls took ages for sites, really bad.

With VPN disconnected speeds were my usual max, and other locations non US seemed still pretty good, so are your US servers overloaded at times, cos speeds drop a lot on them frequently and are sadly unusable at times.

Shame because this has been really good for me until recently.

Just to say, Miami now, mid day UK time and I'm getting 1 meg download on it. Tried New York and it's getting this:

Download: 0.66 Mbps

Upload: 0.33 Mbps

Ping Latency 113.75

Not really usable for streaming Netflix or US content.

Shame cos generally its been great until recently. For Privacy it's great. No good for streaming sadly.

Thank you for your efforts, and the response.

Dear Customers,

Today 03-07-2016 we have updated our config files, most of server should be online. Netherlands, Poland, South Africa and France will be fixed later this week.

All servers have fresh IP's now.

We have also decided to add a new location to compensate you long waiting time and last down times.

New location is : India.

Please redownload your config files from your customer panel on our website in order to get latest files.

Warmest Regards

OK then. I hope that the server will be restored soon.

By the way I wanted to know if I am allowed to use my account on two PCs at the same time without getting banned? (I wanted to be connected to one server on my main machine for example and be connected to another server on my RDP).

Yes, you cant just connect to same server from 2 locations at once from same account.

But you can do:

1. PC - Russia VPN Server
2. RDP - USA VPN Server

Speed of the vpn connection depends on many factors such as your own network connection, current server load, distance between you and server and many many others..

Whole Dissemble.me Staff would like to thanks to every customer for staying with us in 2016 and choosing our service.

Happy and Annonymous 2017!

To everyone having troubles with accesing your accounts, please be advised that we are working on it.

We currently have some issues with our database.

Quick update:

"We had some serious issue with our database. We had to load a backup but some of data is permanently lost.

If you cant access your account please follow those steps:

1. Go to dissemble.me
2. Register under your OLD username.
3. Send us an email with: Your username, Your payment id, Your payment date and subscription lenght.
4. After your caseis verified we will manually restore your account.

Everyone hit by this will get few weeks extra as an compensation.

We are extremly sorry for this issue and we know that we have failed you but it was mainly caused by 3rd party factor (DataCenter Issue)?

Warmest Regards

Hello,

We are currently working on bringing everything back. We have restored our website and fixed most security issues.

Today most of our functionalities are back. However we recommend to refrain from buying it till tomorrow as we still need to bring back some VPN locations + activate and restore customers account.

But we are not going anywhere. Dissemble.me VPN will stay here to serve you all with best anonymity possible. We are aware that we failed trust of some of our customers. I can promise you that we will work even harder to regain our trust. We will announce few major changes in next month.

Follow our thread and website for more updates.

Regards

CEO

I paid today but my payment is not being reflected on my account, is there any problem with your payment system? my username is ckamus and I paid through paypal.

sweatpants - January 16, 2017, 7:54 pm

I'm saying this in a manner not to sales trash but to advise everyone to not buy it for the time being untill [RockBeltHostLTD](#) says that It's safe to use and it's back up... my account was reinstated but i haven't been able to use the service..

ckamus - January 16, 2017, 11:55 pm

Well, no response from op, and now my username and password are not working, sorry but I'm going to ask for a refund to paypal from buyers protection, this vpn always was my favorite its a shame that has gone.

soy132 - January 17, 2017, 12:42 pm

in the same boat as sweatpants, it's literally been 11 days since support gave me back my account the main site. still can't even use the service though because they will not fix vpn login and support will not respond. it's sad this was definitely one of the best vpns out there for awhile.

I completely agree and have emailed several times. I wonder if they didnt get seized and its not some giant setup..... I paid lifetime and this is a real dissapointment.

Pablo Emilio Escobar - January 26, 2017, 9:05 am

BAD service,

Since they deleted all the account they never opened a new one / refunded me.

Emailed them several times (I have proofs).

If anyone wants any proof of the account not working or email sent and they didn't gave me an answer just tell me I will take screenshots or whatever you want.
