Thread: [Cloudflare resolver](#)

Laku - October 31, 2015, 8:40 am

Hello HF

Can somebody help me with Cloudflare resolver but scripted in PYTHON.
I am newbie and don't know too much about python scripting.
Im running win xp 32bit sp3

Kokomikta152 - October 31, 2015, 10:05 am

what have you wrote so far? if nothing you got google to start learning or to search for existing sources.

did the cloudflare resolver a really long time ago... share here your progress i will help you out.

I code one in 2 minutes, test it

```
Install Dependence
Code pip install dnspython
Script
Code import sys
import dns.resolver
```

```
if len(sys.argv) >= 1:
    domain = sys.argv[0]
    answers = dns.resolver.query(domain,'A')
    for server in answers:
        print server
```

I didn't code python in last 2 months, so don't bla me for errors in the code ./ Just reply and i will fix...

correct me if I'm wrong but isn't a cloudflare resolver just basically the last jump of a tracer?

Laku - November 5, 2015, 7:23 am

I made my own priv8 in python and works perfect, thanks for replies :)

I scanned it on virustotal.com website and Neshta. A virus appeared and i think this is because i compiled it with py2exe.

Tested this with cmd by browsing folder with "cd" command and running it from cmd with typing again "CloudFlareRESOLVER.exe"

You are wrong. A CloudFlare "resolver" is querying common subdomains like direct, mail, ftp, etc, and seeing if they return an IP that isn't a CloudFlare IP.
