Thread: [Code\[a\]Cademy Releases Java](#)

Shoe - October 31, 2015, 12:24 pm

Codecademy/Codeacademy, whatever you want to call it, has a Java course.

Link here: <https://www.codecademy.com/courses/learn-java>

ddong - October 31, 2015, 2:19 pm

It's definitely not the best out there for learning. They barely touch data structures and what they do touch on is just adding and looping.

Personally I wouldn't recommend it for people learning and would instead direct them to the oracle tutorials.

It's a relatively new course - came out not too long ago. It's a basic beginner's course to get your feet in the water. ?

krozz - October 31, 2015, 2:49 pm

Yep. Made a thread on this a couple weeks ago.

creation_ - October 31, 2015, 3:33 pm

Although CodeAcademy has some good courses, I really don't like this one.

There's few opportunities over the whole course to actually write your own code as the lessons either tell you exactly what to write or heavily hold your hand in writing it.

There's many much better tutorials for getting your feet wet with Java.

Yeah! :) I most totally agree. I just wanted to post it for anyone who may be interested.

Of course, this is at the very least a good refresher for someone who hasn't programmed in a while.

I wish you could review a course at the end of it, so I could tell the CodeAcademy people my thoughts.

I think they have a community forum in which you can do just that. :)

Thanks, I'll take a look at it.

It is better to read a book and to go out and do it yourself rather than get involved in learning establishments prioritizing in coding.

You have to go and do it yourself not follow instructions and pass a test.

Free Kodak - December 20, 2015, 6:15 pm

i think this site is useful for people who want to learn the basics of each language but it doesn't teach you everything. The html section doesn't even teach you the meta tag.

Nov - December 24, 2015, 8:43 am

Very basic and not very informative by the looks of it.
