Thread: [Selling SimpleRAT Source Code \(VB.NET & Python - Windows, Mac, Linux\)](#)

p4n7h3r - November 1, 2015, 3:38 am

SimpleRAT is a powerful Remote Administration Tool I 've been working on for the last three years. Server runs in Windows and clients run in Windows, Mac & Linux.

I don't have time any more to develop it so I am selling the whole source code.

VB.NET for Windows Server & Client

Python for Linux and Mac Server

(+ A little RealBasic for Password Stealer in Mac)

More info, videos and screenshots: www.simplerat.weebly.com

Windows Client Features:

Run in the background

Protected process which gives 'Access Denied' on force termination. Additionally if another program is used, such as ProcessMonitor(which is capable of killing protected processes), the system will go down with BSOD.

Bypass UAC on both x86 and x64 editions (Only Windows 7).

Advanced keylogger capturing all keystrokes, including 'Backspace' 'Enter' 'CapsLock', special symbols etc.

Custom client build with specified IP/Port (encrypted) & option to set custom creation date

OS info: OSFullName, OSVersion, Platform, Total RAM, Username or run 'systeminfo' command

Open URL in IE Hidden or Normal window and also display exact IE Version to check if vulnerable to exploits

Threaded URL visitor

Website access blocking using the windows hosts file

Add/Delete users

Display custom type message to current user

Process list, kill and gather info such as path, start time, id, window name

Window manager

Remote cmd command output in English for victims in different countries

Startup item list with name and application path

Complete input Freeze/UnFreeze that blocks mouse & keyboard

Reverse mouse clicks

Multi Threaded file download to specified location & option to execute when finished

Permanent installation in system32 and hidden startup item

Change wallpaper from image url or file

Gather browser passwords using external tool (browsers supported: Chrome, IE, Firefox, Opera)

Send Blue Screen Of Death (aka BSOD)

Display a custom sized coloured watermark using specified text

Fill RAM Memory to slow down remote system

Remote desktop control with customizable options to match internet speed(Image quality & Refresh rate)

Complete file manager(browse, delete, open, upload, download, empty recycle bin) with quick-access buttons for Desktop/Documents/Pictures/Programs/Temp

Full featured registry editor

Compile & Run allows you to write VB.NET code, compile it on-the-fly and run it on remote system.

Fully customizable compiler parameters

Hide/Show windows taskbar (not start button)

Ready buttons to Enable/Disable command line and task manager using registry

Open/Close CD/DVD tray

Remote Shutdown/Reboot/Logoff

Prevent specified processes from starting

Simple chat and Text-to-Speech

Set system volume

Get a list of the current ESET's exclusions

Option to uninstall ESET without generating alerts (works even with self-defens enabled)

Spread client by merging with executables in root folder of usb stick and set the same file size to avoid suspicion

Webcam stream (if webcam is installed)

Turn off display and KEEP it off (screen goes black)

Play the classic windows 'Beep' sound repeatedly with custom frequency

Get installed Antivirus software name

Get steam account name (if any)

Get full list of installed applications & uninstaller path (msi based)

Immediate restart of client in case of crash

UPNP READY: No need to configure port forward

Dynamic DNS compatible to use with NoIP/DynDNS

Linux Client Features:

Run in the background

Remote terminal

Remote file manager (browse, upload, download, delete)

Screenshot capture

Download from url & option to execute

Remote keylogger

Prevent programs from starting

Send message

Change wallpaper

Adjust system volume level

Block/Unblock input [Root exclusive]

Mac OS X Client Features:

Run in the background

Remote terminal

Remote file manager (browse, upload, download, delete)

Screenshot capture

Download from URL & ption to execute

Prevent programs from starting

Send message or notification

Change wallpaper

Text-To-Speech

Show fake system form to gather user password in raw text
