Says in the thread that it is scantime FUD, but what about runtime?

It FUDs scantime, so most filehosting sites, skype, email clients don't cause trouble when you send the file to some one.

At runtime your server would be copies to a hidden directory and executed from there in stealth mode.

ah man, its a sale thread. I don't need slaves thank you very much.

There are many people on HF offering free crypts, just search :)

Good luck
