Thread: [Listbox next Item](#)

Geekie - November 3, 2015, 10:21 am

Hey guys, I have started coding this part yet for Obotle for my chessy pick up line bot for omegle. But what would be the best method to go to next item in a listbox. I don't want to use foreach or for I think thinking it starts off a first item once that item is sent it go to next item in the listbox. Anyone has a good method that would work. This isn't multi thread. a single thread.
I was thinking something like this..

```
Code public void ChessyLine()
{
    int currentLine = -1;
    if (currentLine == -1)
    {
        currentLine = listBox1.SelectedIndex;
    }
    currentLine++;
    if (currentLine < listBox1.Items.Count)
    {
        //code message listBox1.Items[currentLine];
    }
    else
    {
        //end of messages
    }
}
```

You can use `Listbox.Items[index]` for this.

Or if you're talking about only selecting, you can do `Listbox.SelectedItem +=1`, don't forget to check for index overflow.

Code private string GetNextCheesyLine()

```
{
    int nextIndex = (lstLines.SelectedIndex == lstLines.Items.Length) ? 0 :
lstLines.SelectedIndex++;
    return lstLines.Items[nextIndex].ToString();
}
```

I wrote that off head. Should work.

Thanks guys, Reason why I ask about my code because I have to send the message to the stranger.

So the code would look like this.

```
Code public void ChessyLine()
```

```

{
    int currentLine = -1;
    if (currentLine == -1)
    {
        currentLine = listBox1.SelectedIndex;
    }
    currentLine++;
    if (currentLine < listBox1.Items.Count)
    {
        textSend.Invoke(new MethodInvoker(() => textSend.Text =
listBox1.Items[currentLine].ToString()));
        Chat("Bot: ", Color.Blue, FontStyle.Bold, false);
        Chat(textSend.Text, Color.FromArgb(124, 133, 142), FontStyle.Regular, true);
        _omegle.SendMessage(textSend.Text);
        textSend.Invoke(new MethodInvoker(() => textSend.Text = string.Empty));
    }
    else
    {
        textSend.Invoke(new MethodInvoker(() => textSend.Text = "We're at the end of chessy
lines, Good bye for now"));
        Chat("Bot: ", Color.Blue, FontStyle.Bold, false);
        Chat(textSend.Text, Color.FromArgb(124, 133, 142), FontStyle.Regular, true);
        _omegle.SendMessage(textSend.Text);
        textSend.Invoke(new MethodInvoker(() => textSend.Text = string.Empty));
    }
}

```

Edit, The method I posted above works great thanks guys for the help.
