Thread: [Help me make this look good? Releasing for every one when done!](#)

CrackIt™ - November 5, 2015, 6:58 pm

so i'm making a new cracker to give away on hf but i cant seem to get the design right (i suck at designing stuff) so i'm uploading the project for any one to mess around with the layout it would be a very big help and if any one wants to help me pick a nice clean theme that would also be a big help!

here is what it looks like at the moment

feel free to add any thing extra you want to see in the project ect...

[DL Link](#)

pm me a dl link when done and ill let you know what i think

edit: going to bed will check back tomorrow hope some one helps me out! <3

Rather than asking us for help with the UI, how about you post your code and we help you to make it better.

SIM-2263652 - November 6, 2015, 12:29 am

Well just by implementing a theme it would already be prettier.

Josh? - November 6, 2015, 1:04 am

Grammar ?

But add a theme

Odus - November 6, 2015, 2:51 am

Never been a fan of mono-form, they often leave a lot of whitespace. You could:

- Split the proxies/combo loading into another form
- Remove the update checks and do it automatically. Prompt if there's one available
- Move the hit options into a context menu, duplicates should be omitted automatically on combo load
- Put the major & minors of the version in the form title

Just from a quick look on my phone.

Just a technical question regarding "Sites to Crack" - Are you going to provide updates for when the configs change, or have it pull updates off of a server? Configs change quite a bit and if you're taking the time to make a cracker you may want to consider making config files either manually adjustable (including the site to crack) or have it pull updates. As far as the visual aesthetics go, I have to agree that a simple theme would be nice but I think functionality is more important than a theme :) Looks great so far, keep it up!

nathan72389 - November 6, 2015, 3:44 am

you are expecting us to download it then redesign it?

lol, no way. if it was mine, i would have to change the design so much that i would end up rewriting 2/3 of your code.

thanks for the advice i will try and fallow it

#Kat - November 6, 2015, 2:43 pm

Sometimes simplicity is necessary designing an app that is like to consume resources heavy (ie. .net crackers) threading... i used to only use classic 6 for "crackers" gj tho

KnownLab - November 7, 2015, 6:55 am

Will have a go tomorrow, I'll PM you screenshots ect when done.

Activeuser - November 8, 2015, 9:12 am

Where do you get the DBC usernames and passwords?
