Rooting the phone

Why? You can't hack without rooting.

1-Download KingRoot

From here: <http://www.kingroot.net/>

or here: <http://forum.xda-developers.com/android/...0-t3107461>

Use google for more Download Lniiks

2-Open king root, Click the mystrey button and wait.[you may need internet for this]

3-If you see a green check then you rooted your phone.

If you didn't see the green check,make sure you are connected to internet+keep trying.

Note:After that, kingroot may ask you to install kinguser to take control of root permissions [king user is like Super SU]

So was that like a copy + paste?

dSploit does not work, and zAnti doesn't look like that (or work for me)

roleeswagger - November 8, 2015, 3:28 am

dSploit is no more supported and most of apks on the net are malware or bad copies... if you want a good app for pentest download ANTI from imperium labs... the founder of dSploit now is working with Imperium and coding for ANTI

Like I said, zAnti.

That doesn't work for me either.
