This actually is pretty cool!

It's simple and very nice!

Have a nice day! ?

You need to learn to use outerglow instead of messing around with it or worse leaving it at default.

im all for tutorials but dont expect people to critique u when ur just doing what someone else made

& poorly executed which idk how u managed to pull off

gnarly. - November 9, 2015, 1:02 am

im assuming u did one design, then flipped it and recoloured it for the other circle?

u need to work on the lines A LOT as they are really bad near the top left of the blue circle. look carefully and the lines are gross.

I really like the simplicity of it :D

Thats why I thought I had seen this before with other colors lol.

The idea is nice but execution not so much.

Really simple and very nice to look at :)

Gravity Shifter - November 18, 2015, 9:50 am

Hmm simple but still really nice .. good job man

Odd you followed a Illustrator tutorial using Photoshop.

As Sasori mentioned, post up a link to the tutorial.

I repeat that I've made it in Photoshop and the idea got it from the Illustrator tutorial stated there.
