Thread: [\[TUTORIAL\] Royalty | How to make a moving signature](#)

Fiber - November 8, 2015, 12:20 am

What will I learn from this tutorial?

A very beginner way of showing you an easy way to create moving text in photoshop that can make your signature stand out

Preview

Spoiler [\(Click to View\)](#)

Tutorial

1 - Create your document with the size of the HF signature space with a transparent background (650x200 max) but for this tutorial I will be using 600x200

Spoiler [\(Click to View\)](#)

2 - Let's add some guides so we can center our text correctly.

To do this enable your rulers with (CTRL+R) and they should appear.

Now to get your guides to appear all you need to do is drag down from the rulers and drag them into the center until you see it lock, do the same for both sides.

3 - Let's add the HF background colour because we will be saving this in GIF format it will need the background.

Set one of your colour pallets too #333333 and just use the rectangle tool to add in a background, it now should look something like this

Spoiler [\(Click to View\)](#)

4 - Now we can add our text this can be anything. I'll just use the font ADAM.CG PRO and start with a basic red colour for now. And then center your text using the guides we put in earlier.

So you should have something like this so far.

Spoiler [\(Click to View\)](#)

5 - Let's begin on the making the text move, this is the only complicated part of this tutorial (it's super easy).

First set your photoshop into "essential" in the upper right hand corner, this should open up your

timeline bar at the bottom.

6 - At your timeline section we will need to duplicate our first frame, find the button that looks like this; and you should end up with it looks like this.

Spoiler [\(Click to View\)](#)

7 - Making sure you have the second frame selected we will move our text close to the top of the canvas and it should look like this now

Spoiler [\(Click to View\)](#)

8 - Back down at the timeline select both frames (CTRL+Left click) and we are going to tween the frames, to do this find this button; and a menu will pop up, we are going to add in 35 frames and then hit OK

Spoiler [\(Click to View\)](#)

9 - So now you should have something like this, and you can save it like this but that's boring we want it too "bounce".

Spoiler [\(Click to View\)](#)

10 - Now we are going to select all our frames and duplicate them.

We can do this by looking in the top right hand corner of the timeline and clicking the arrow that's pointing down and selecting "select all frames" (duh)

So once they are all selected go back to dropdown you just selected the frames in and click "copy frames"

(let's also not forget our original count of frames because it will come in handy later; it should be 37)

So go back into the drop down and paste the frames. make sure paste after selection is checked and hit OK

Spoiler [\(Click to View\)](#)

CONTINUED ONTO NEXT POST

Fiber - November 8, 2015, 12:22 am

11 - Now we should have duplicated our frames and we will need to reverse them, all the frames should already be selected for you (if not use (CTRL+Left click) to select the frames individually.

So head back into the top right dropdown menu; and select "reverse frames".

12 - We are doing the same steps (from 6 to 10) accept in the opposition direction.

(let's also not forget our count of frames because it will come in handy later; it should be 74)

So go back into the drop down and paste the frames. make sure paste after selection is checked and hit OK

Spoiler [\(Click to View\)](#)

13 - Now we should have duplicated our frames and we will need to reverse them again,
So after you have selected the frames head back into the top right dropdown menu; and select "reverse frames".

14 - And we are done time to save. Click "file" at the top left of photoshop and select "save for web" and done.

I hope this has helped you but if you are still finding this tutorial hard or see I have messed up on a step that I didn't see please inform me via a PM.

21st Century Schizoid Man - November 8, 2015, 12:22 am

Place holder for fiber, ?

Royal Crowd - November 8, 2015, 12:23 am

Nice guide, will use this if I ever want to make a moving signature :D

Maybe you can make more tutorials on different types of animated signatures you can make?

Have a nice day! ?

Neos07 - November 8, 2015, 12:24 am

Thanks Fiber for the tutorial ?, I'll check it out later.

Fiber - November 8, 2015, 12:26 am

Yeah for sure, lots of possibilities like a tut made by another member "shine" effect on your text.

(Nov 8, 2015 01:24 AM)Neos07 Wrote: [\[CITE\]](#) Thanks Fiber for the tutorial ?, I'll check it out later.
Thank you very much appreciate it!

Neos07 - November 8, 2015, 12:55 am

Thanks again,

Squids - November 8, 2015, 1:01 am

Thanks! Gonna check this out soon

Fiber - November 8, 2015, 1:11 am

(Nov 8, 2015 01:55 AM)Neos07 Wrote: [\[CITE\]](#) Thanks again,

Nice man, think you edited the text in a random frame thats why you got it flashing like that, always edit the very first frame if you are changing the style.

Optimized - November 8, 2015, 1:21 am

Nice stuff Fiber. Good job!

Thanks guys, hope this comes in usefull for you ?

TRAUMA - November 27, 2015, 3:43 pm

Wow! Thanks bro, I actually sucked at GIF's.. This truly did help a lot.

SirDym - November 29, 2015, 4:17 am

OMG! Nice Tutorial :) Thank you very much

i__i - November 30, 2015, 8:02 pm

Love the layout for this tutorial, very easy to follow. Thanks so much for this! :D

parawille - December 1, 2015, 1:00 pm

Nice tutorial Fiber!!!!

(25 characters)

Venny123 - December 6, 2015, 2:15 pm

Really great tut I havent made one of theses in years gonna try it again lol

Salieri - December 7, 2015, 2:07 pm

Quality tutorial, thanks a lot my man! :)

jambos - December 13, 2015, 9:22 am

nice tut animations is good on signatures

Intern - December 13, 2015, 7:56 pm

I want to see how you made those dividers bud

lottomax - December 14, 2015, 7:45 am

Oh I was really looking for something like this. Thank You very much.

Fiber - December 14, 2015, 11:27 am

DemolisherJax - December 14, 2015, 11:15 pm

Thanks a lot for the tutorial, I might make a signature soon, hehe. :)

Nobilma - December 18, 2015, 5:53 pm

Awesome Guide, I'll probably design one myself

RaidenHF - December 18, 2015, 8:15 pm

Thanks for this tut. Could use sometime! <3

-Apache- - December 19, 2015, 1:35 am

Amazing tut, when i get l33t, which i hope is soon ima def use this to make myself a sick ass sig.

Best Buy - December 20, 2015, 7:37 pm

Very nice tut, keep making more!

Exchange.Service - December 23, 2015, 2:31 am

great tut! will use this in the future
thanks a lot

waraffiliate - December 23, 2015, 2:57 am

Nice tutorial mate. Thanks for the share.

Trafalgar_Law - December 24, 2015, 10:38 am

Thanks mate I made my first very own signature and it's a moving one too :)
Thanks for HQ tut:)

ArrowX - December 27, 2015, 6:15 pm

Thanks for the great tutorial!

I really learned how to do this, and am practicing even more on this!

Band1to - January 8, 2016, 10:15 am

Thank you very much appreciate it!

h?ck?r - February 2, 2016, 6:08 pm

Great tutorial, but how can I make the frames move faster without it looking choppy?

(how to speed up the animation?)

ussef.rekkas - February 3, 2016, 9:34 am

thanks to this great tutorial

Ralsky - February 3, 2016, 10:50 am

thanks this guide helped alot

Kenny Schrub™ - February 4, 2016, 8:43 am

Hello mate, is the download file removed ?

EliteShip - June 22, 2016, 6:41 am

Very nice tutorial ! thank you

.BangsOnly - June 22, 2016, 10:19 pm

Nice Tutorial OP, Thanks for sharing, im new into graphics

theplayernll - June 27, 2016, 2:37 am

Thanks for the tutorial, i make myself a nice one!

Talu - June 27, 2016, 10:35 am

Very good tutorial, thank you for sharing :)

32x0LF - July 2, 2016, 4:38 pm

Thanks for the tut fiber really helpful

JavaDriveBy - July 2, 2016, 4:56 pm

Nice guid. Help me thx for share.

Snakester - July 3, 2016, 8:43 am

its so cool i learnt a lot thanks

Draako - July 20, 2016, 7:14 am

This is actually very nice, very easy to follow. Thanks so much for this!

Puree - July 23, 2016, 4:09 am

Thank you very much

clear tutorial

METALSLUG - August 12, 2016, 3:20 pm

My avast detects this page as a threat lol, script:inf ????

From object "u.pomf.is" = "URL:Mal"

_Banana - August 29, 2016, 10:24 am

Great tutorial, may be using this in the future!

hinstera - April 10, 2020, 4:22 am

Please Update the Thread Links Thank you.

xASAP - October 17, 2020, 7:24 am

Great tutorial man !! thanks you :)

Bullup - November 9, 2020, 4:42 am

Great tutorial but sadly the pictures doesn't work anymore ;(

meme - April 8, 2021, 5:46 am

Amazing tutorial thanks buddy

implxion - April 30, 2022, 6:40 am

the pics dont work anymore :(nice tut

Fiber - April 30, 2022, 7:12 am
