Thread: [Ideas for userscripts](#)

Remix - November 8, 2015, 9:35 am

yo

Do you have any ideas for userscripts?

I have some free time and I wanted to write userscripts but I don't have any ideas for it.

How about some bots for games written in javascript?

Like <https://github.com/apostolique/Agar.io-bot/>

(Nov 8, 2015 11:39 PM)xadamxk Wrote: [\[CITE\]](#) Implementing Reddit's favorite bar into HF :3

Could you explain that?

I don't know what it is and how it works.

Remix - November 8, 2015, 11:55 pm

Should you be able to mark a subforum as favourite or should it read from the post activity?

Remix - November 9, 2015, 3:20 am

(Nov 9, 2015 01:19 AM)xadamxk Wrote: [\[CITE\]](#) Mark subforum.

Make it the same header as reddit though, like minimal i mean.

Will do it when I'm at home.

Won't be that difficult.

Won't be that difficult.

Also allow custom links to be placed there. This will help if you have certain threads/places that you'd like to visit without clicking an extra button.

Yeah would fit into it.

Maybe I'll add some more features.

You think an associative array for css attributes etc would be useful that everybody could customize it easily?

Example:

Redirect Bitcoin: [1btcaddress](#) to blockchain.info/address/1btcaddress

Josh? - November 11, 2015, 12:39 am

This seems like a useful idea. Will the end results be released publicly?

Yes, it will be released.

(Nov 10, 2015 11:52 PM)xadamxk Wrote: [\[CITE\]](#) How goes progress noob?

Have you started?

I've started but I'm a noob it needs some time):

I kind of want both the suggested userscripts for HF (favourite forum bar and redirecting the btc tags)
