Thread: [Performing a website click](#)

prapao - November 8, 2015, 9:54 pm

Hey.

I want to make a bot that click a button on a website within a timer, but cant get it to click?

<https://gyazo.com/5039e097232a2240c877286efa0e2abf>
<https://gyazo.com/36991a9cb25d3e802ab8d7e71e0de9e7>

I dont know what im missing here. Any help?

SL x TnT - November 8, 2015, 10:13 pm

Debugging is an important skill.

Put a breakpoint inside your If statement. Make sure you're grabbing the correct element. From what I can tell, you aren't.

Once that's done, try to get it to click.

If you can't get that working, grab the form element by the id and invoke "submit." It should be "crimeform."

Don't forget to set the "cID" id element's value to 0. Not sure if that'll affect it or not.

lol, you did not get complete copy and paste code so you ask if someone else has any idea?
you have your answer.

SL nailed it. Not sure what else you want.

WebBrowser1.Document.All("crimeform").InvokeMember("click")
