Thread: [Download from a paypal site without paying! \[HOT\]](#)

Byt3Door - November 9, 2015, 1:42 pm

Just a little basic html tip for those who are trying to download an application from sites which has an paypal order page & link to start you off.

Use a proxy when you try this to hide your ip as some sites will record your ip when you connect for security.

- 1) Rightclick your mouse (ctrl+click) viewsource and open the source of the site in an a texteditor
- 2) Search for the word "return"
- 3) Next to it you can find the url for the thank you page
- 4) Copy the url and paste it in your browser and you will see the download link

This works only if you can download instantly after payment, it will not work if the link needs to be emailed to you.

You can try it here to start with:

Code:

`ramphelp.com/halfpipe.html`

About half way down the page you will find:

```
<input type="hidden" name="return"
value="ramphelp.com/65984523/thanks/68912hp654/26865thankyouhp08363215423.html ">
```

Copy the link into your browser and download.

Kind of an old and saturated method.

Used it back in 2010.

Many websites have patched this already, even though it says "Successfully paid".
It won't come through, they will check the payment manually to make sure it's valid.

This only works on really insecure sites. This doesnt work on slut, payivy or paycore.

Bos™ - November 10, 2015, 6:14 am

This will only work on products that are worth \$0
