I like the simple flat design and the colors. Have you given thought in making every other line slightly different color?

SavageAF - November 10, 2015, 7:32 am

Wow, looking at some of these, this is great

I love it !

Btw I found an issue.

Explanation:

If someone try to create a new Dox with the same title of an existed Dox, it will return :

Code An entry with this already exists.

The URL of 'already exists.' = http://doxicity.xyz/dox/Already_Existed_Dox

Which doesn't work.

To fix it, change it to : http://doxicity.xyz/?dox=Already_Existed_Dox

Or add a rewrite rule :)

Not a big deal thought ^^

You may wanna make SSN's disallowed since you have a domain with namecheap. They will suspend you.

As I've mentioned with multiple people, the domain is not registered through Namecheap.

The hosting provider I use, uses the API inorder to hand out .xyz domains and I've already spoken with the hosting server admin and he said he won't suspend me for it.

Thanks! That is one of the main things I like about it to, just hated that everyone that was up didn't allow SSNs, etc.

I allow absolutely everything.

Plus it gives me a good place to post doxes of my own.
