Thread: [Obtain the session windows username with PHP and other problem](#)

FrenchDoxx - November 10, 2015, 2:06 pm

Hello,

I had test my cookie stealer, I obtain : IP, Port, hostname (with ISP name), UserAgent but I want to got the session windows name, I tell about this example :

[img]http://www.memoclic.com/medias/var/2009-15/ishot-0904101748301.jpg[/img]

I found 3 php script :

Code `$username=shell_exec("echo %username%"); echo ("username : $username" );?>`

Source :

<https://openclassrooms.com/forum/sujet/php-get-username-session-windows-nt-logon-57595>

Or these :

If by current windows user you mean the user running the script then that is set in an environment variable which you can get using:

Code `<?php echo getenv("username"); ?>`If you want to get the home directory of the user running the script you should use`<?php echo getenv("HOMEDRIVE") . getenv("HOMEPATH"); ?>`

This should output either C:\Users\Fred or C:\Documents and Settings\Fred depending on if you are using windows Vista/7 or windows XP.

To see all of the environment variables you can do:

Code `<?php global $_ENV; var_dump($_ENV); ?>`

<http://stackoverflow.com/questions/12754437/get-windows-username-of-current-user-using-php>

Which one is right ?

Questions : on a cookie, I can see a username ? (Like his Facebook)

I can use 2 scripts or more in the same time ? I want use 4 script

I host on altervista and hostinger.fr
