Thread: [DarkComet - User executed RAT but not showing up in my connections list](#)

**CDCookie** - November 15, 2015, 11:23 am

So I am using DarkComet sent the RAT to a friend to test it and it is not showing up in the connection list and neither when I execute it . I know a lot of you are gonna say I did not port forward but I did . on canyouseeme.org it says it is available and is green. What can be wrong ?

**ImTrojan** - November 15, 2015, 3:32 pm

His anti virus removed it. You need to crypt your viruses bud. Pay the \$40 for luminositylink and it auto crypts and comes with a lot of other stuff. Get rid of dcr it's way too out dated.

**LOLTwist** - November 15, 2015, 3:38 pm

If he has windows 8 or windows 10 darcomet doesn't execute on windows 8 and 10.

Are there any up to date free RATs ?

check port's Ip ... try restart ur computer or ur internet

**Sennheiser** - November 17, 2015, 7:31 am

how is it you can afford a computer, internet, and most likely a phone but can't buy a \$40 RAT?
