It's supposed to be a "clean" style & a fragmovie.

I liked it o.O I haven't seen many CS:GO edits, but of the few I've seen, this is better than most. :)

Well, first of all, in order to pretty much get anywhere, get rid of the lag, it looks like you recorded it under 30fps, which is not acceptable considering most people use 100+ fps clips when editing, and 200-300+ for smooths.

Nice edit bro, what do you use? I use Sony Vegas Pro 13 and GOTV for my demos, I haven't done POVs. I don't put to much effort into them though because I don't know how to edit that well. I want to find a place I can learn without searching for each thing on YouTube, good luck with your videos! ??

10fps shit, fuck watching the rest

1tap - November 17, 2015, 3:05 am
looks okay, you need to fix that fps though
