Thread: [IOS9 Icloud Backups ?](#)

#FFFFFF ? - November 17, 2015, 8:17 am

So is there any way to download IOS9 cloud backup files yet? I have been trying to figure out a way to get my backup, but I can't seem to find anything that actually works (other than some program that says it can, but want's \$60 for something I will only use once....

So is there any way to download it without having to pay \$60? Someone told me about a program called AnyTrans, but I can't use it because you have to plug in an iphone before it will let you do anything and my cable wont let me sync

The 1.92 glory days... Lmao

Someone needs to crack that shit again

Also Iphone backup extractor by Reincubate can do it but theres no crack for it since its not well known. It doesnt seem hard to crack

momoshiro - November 20, 2015, 3:27 pm

iPhone Backup Extractor pulls the backup via their servers and is limited to 5 accounts, not much use in terms of cracking. The latest EPPB is proving to be fairly difficult too.

Last fonelab update says it can manage IOS9 but never come accross one so can't tell if it's true or not.
