Thread: [\[VB.NET Searching\] How to click a button \[Searching\]](#)

Odayleet - June 27, 2010, 10:54 am

So here is the code:

```
Code <input type="button" value="Enregistrer"
onclick="onSubmitToolBarItemClicked('SaveContact','');" class="UIButton">^
```

I'm trying to do this:

When someone click the button1 in my program, it will click the 'Save' button in the webbrowser.
The code of the Save button on the page is up ^

What would be the code for that ?

Thanks in advance, Julie

No one know how I could do it please?

Bitwin - June 28, 2010, 1:34 pm

Could you share the webpage ?

Edit:

Forget it, this worked for me:

Yes but it's not every time that it is "Enregistrer" it depends of the language of the user's choice ...
