Thread: [Sending mail \(GMAIL\)](#)

**twobol2002** - November 20, 2015, 10:55 am

Hi guys,

I need your help. My problem is that why I can't send an email to gmail? :(

Code Private Sub Button1\_Click(ByVal sender As Object, ByVal e As EventArgs) Handles Button1.Click

```
Try
    Dim Sntp_Server As New SntpClient
    Dim e_mail As New MailMessage()
    Sntp_Server.UseDefaultCredentials = False
    Sntp_Server.Credentials = New Net.NetworkCredential("username@gmail.com",
"password")
    Sntp_Server.Port = 587
    Sntp_Server.EnableSsl = True
    Sntp_Server.Host = "smtp.gmail.com"

    e_mail = New MailMessage()
    e_mail.From = New MailAddress(txtFrom.Text)
    e_mail.To.Add(txtTo.Text)
    e_mail.Subject = "Email Sending"
    e_mail.IsBodyHtml = False
    e_mail.Body = txtMessage.Text
    Sntp_Server.Send(e_mail)
    MsgBox("Mail Sent")

Catch error_t As Exception
    MsgBox(error_t.ToString)
End Try
```

End Sub  
please help.

Thanks in advance

Probably because you don't own username@gmail.com. Kidding. I think there's more to be done to send through them. I know when I was making an SMTP mailer, I had to send like 4 times for the message to go through once (I don't know and never figured out why.)

e_mail = New MailMessage()
e_mail.From = New MailAddress(txtFrom.Text)
e_mail.To.Add(txtTo.Text)
e_mail.Subject = "Email Sending"
e_mail.IsBodyHtml = False
e_mail.Body = txtMessage.Text
Sntp_Server.Send(e_mail)
MsgBox("Mail Sent")
```

```
Catch error_t As Exception
    MsgBox(error_t.ToString)
End Try
```

End Sub

please help.

Thanks in advance i don't know if this code can help you, it is a bit hard to know what is wrong? you got a error or something? i remember i had something similar in the past and this is the code that only worked to me. anyways you need to turn off some security on ur gmail to make it work. Hope it helps

```
Dim mymailmessage As New MailMessage()
```

Try

```
mymailmessage.From = New MailAddress("mail@gmail.com")
mymailmessage.To.Add("mail@gmail.com")
mymailmessage.Subject = ""
mymailmessage.Body = ": "
Dim SMPT As New SntpClient("smtp.gmail.com")
SMPT.Port = 587
SMPT.EnableSsl = True
SMPT.Credentials = New System.Net.NetworkCredential("mail@gmail.com", "password")
SMPT.Send(mymailmessage)
```

```
Catch ex As Exception
```

```
End Try
```

rednas, your message did not contain anything. You just copy pasted a quote.

**twobol2002** - November 20, 2015, 11:09 am

it says:

"The SMTP server requires a secure connection or the client was not authenticated."

**SIM-2618262** - November 20, 2015, 11:12 am

(Nov 20, 2015 12:09 PM)twobol2002 Wrote: [\[CITE\]](#) it says:

"The SMTP server requires a secure connection or the client was not authenticated." you tried the code i posted? anyways you have to go to security in ur gmail and change the security to low or something to make it possible for ur application to access it.

(Nov 20, 2015 12:09 PM)twobol2002 Wrote: [\[CITE\]](#) it says:

"The SMTP server requires a secure connection or the client was not authenticated." and i think this error mean that it has something with the security with ur gmail todo. so nothing should be wrong with the code. so just change the security and it should work:)

**nathan72389** - November 20, 2015, 11:14 am

you have to allow un secure apps through your email account.  
its what almost every email carrier is doing now.

**twobol2002** - November 20, 2015, 11:19 am

thanks guys for your help... i got it working by changing the settings in my gmail.... :)
