Thread: [xVulnerable - RAT Help Desk | FREE RAT SUPPORT](#)

**xVulnerable** - November 21, 2015, 9:10 am

Welcome to my RAT help desk. Here you may ask any RAT related questions, you will be answered shortly. I am an expert in the RAT scene with a lot of experience. I am willing to use all knowledge I've learned to assist anyone who may require assistance.

Please do not PM but rather post on the thread.

TOS:Spoiler ([Click to View](#))

Please keep everything educational related.

I do not promote illegal activity and I do not help in 'spreading'.

**wovami** - November 21, 2015, 9:14 am

Is it possible to bind yourfile.exe with lets say a mp3 and when you bind them i turns into a mp3 file instead of an .exe file. Been having trouble finding out with a spoofer and how to trick people with it..

**xVulnerable** - November 21, 2015, 9:15 am

(Nov 21, 2015 10:14 AM)wovami Wrote: [\[CITE\]](#) Is it possible to bind yourfile.exe with lets say a mp3 and when you bind them i turns into a mp3 file instead of an .exe file. Been having trouble finding out with a spoofer and how to trick people with it..

No it's not. Binding will not change any extensions. Spoofers do not work and will simply break your file rather than spoof it.

**wovami** - November 21, 2015, 9:45 am

(Nov 21, 2015 10:15 AM)xVulnerable Wrote: [\[CITE\]](#) No it's not. Binding will not change any extensions. Spoofers do not work and will simply break your file rather than spoof it. Alright thanks, added you on skype interested in one of your services :P

**yosefebesh** - November 21, 2015, 10:09 am

Where do I host a file without revealing the extension?

**Ballin' Like I'm Koby** - November 21, 2015, 10:16 am

This looks good, let me know if you need any extra help.

**xVulnerable** - November 21, 2015, 10:31 am

(Nov 21, 2015 11:09 AM)yosefebesh Wrote: [\[CITE\]](#) Where do I host a file without revealing the extension?

It is not possible to hide the extension.

**#Natasha** - November 21, 2015, 1:48 pm

Are you able to test my Stub and see if it works?

Ive been spreading all day and not one slave, Im thinking does it work if someone else connects ?

**xVulnerable** - November 21, 2015, 1:54 pm

(Nov 21, 2015 02:48 PM)Fiat Wrote: [\[CITE\]](#) Are you able to test my Stub and see if it works?

Ive been spreading all day and not one slave, Im thinking does it work if someone else connects ?

Install sandboxie (or even better, a VM) to test your file. Make sure you are not using your local host (127.0.0.1) as host but rather your DNS/IP.

**Root** - November 21, 2015, 1:59 pm

Nice to see RedLions supporting the R.A.T.s section.

**Yakz** - November 22, 2015, 8:36 am

(Nov 21, 2015 11:16 AM)Mill Cat Wrote: [\[CITE\]](#) This looks good, let me know if you need any extra help.

It's appreciated that you want to help but unfortunately only group members stated in the OP can provide support.

-

Don't hesitate to post here if you're having difficulties using a RAT or have any questions whatsoever.

**yosefebesh** - November 22, 2015, 2:15 pm

my NanoCore rat just went from working to completely broken in 2 hours. No matter what I try, nothing is working to fix it. Port in check, DNS changed, crypter changed, settings changed. Would appreciate an answer :)

**xVulnerable** - November 22, 2015, 2:30 pm

(Nov 22, 2015 03:15 PM)yosefebesh Wrote: [\[CITE\]](#) my NanoCore rat just went from working to completely broken in 2 hours. No matter what I try, nothing is working to fix it. Port in check, DNS changed, crypter changed, settings changed. Would appreciate an answer :)

How and where are you testing your file first of all to determine it is not working?

**o00o000o0** - November 22, 2015, 2:43 pm

Having problems with Nanocore ports are open and NO-IP seems to be working the setup looks perfect but when I test I get no connections

**yosefebesh** - November 22, 2015, 2:44 pm

(Nov 22, 2015 03:30 PM)xVulnerable Wrote: [\[CITE\]](#) How and where are you testing your file first of all to determine it is not working?

I tested it on a virtual machine, another PC, sandboxie and anubis.

**Bamboozla** - November 22, 2015, 3:03 pm

Hey I have I quick question. I use Darkcomet, how can I create my server as a .scr instead of an .exe? Thanks.

**yosefebesh** - November 22, 2015, 3:41 pm

(Nov 22, 2015 03:43 PM)merkie22 Wrote: [\[CITE\]](#) Having problems with Nanocore ports are open and NO-IP seems to be working the setup looks perfect but when I test I get no connectionsI have the same problem. It seems there is either a problem with No-Ip or nanocore. Try using fishdns.

**Kinguin** - November 22, 2015, 3:42 pm

What Rat & Crypter are you using now? If not, wich would you choose?

**o00o000o0** - November 22, 2015, 3:45 pm

(Nov 22, 2015 04:41 PM)yosefebesh Wrote: [\[CITE\]](#) I have the same problem. It seems there is either a problem with No-Ip or nanocore. Try using fishdns.

Did FISHDNS work for you?

**xVulnerable** - November 22, 2015, 3:46 pm

(Nov 22, 2015 03:43 PM)merkie22 Wrote: [\[CITE\]](#) Having problems with Nanocore ports are open and NO-IP seems to be working the setup looks perfect but when I test I get no connections  
A common mistake is keeping your security software on. Make sure you have no AVs installed, windows defender & windows firewall turned off.

(Nov 22, 2015 04:03 PM)Bamboozla Wrote: [\[CITE\]](#) Hey I have I quick question. I use Darkcomet, how can I create my server as a .scr instead of an .exe? Thanks.  
Darkcomet offers a variety of different extensions from the builder in the stub finalization tab.

(Nov 22, 2015 03:44 PM)yosefebesh Wrote: [\[CITE\]](#) I tested it on a virtual machine, another PC, sandboxie and anubis.

There could be many things which could make your RAT suddenly stop working.  
Make sure all AVs are uninstalled, firewall and windows defender are turned off.  
Both on your host PC and your VM.

(Nov 22, 2015 04:42 PM)Kinguin Wrote: [\[CITE\]](#) What Rat & Crypter are you using now? If not, wich would you choose?

I don't recommend any HF crypters as most of them are complete shit.

**Kinguin** - November 22, 2015, 3:49 pm

(Nov 22, 2015 04:46 PM)xVulnerable Wrote: [\[CITE\]](#) I don't recommend any HF crypters as most of them are complete shit.Okay, but wich Rat then?

**yosefebesh** - November 22, 2015, 3:50 pm

(Nov 22, 2015 04:46 PM)xVulnerable Wrote: [\[CITE\]](#) A common mistake is keeping your security software on. Make sure you have no AVs installed, windows defender & windows firewall turned off.

Check if your DNS is pointing to the right IP.

Open cmd and type: ping enteryourdnshere.mydns.com

Is it pointing to your current IP?

(Nov 22, 2015 04:59 PM)Bamboozla Wrote: [\[CITE\]](#) I appreciate the help! Thank you. I have one more quick question, what directdl site is it that creates a link like this:

<https://gyazo.com/794d9d37f5cd3f7404fa9141262d3d68> Thank you if you know :)

Not sure, I think that's done with some kind of script. Never tried it...

zeroabsolut - November 23, 2015, 8:27 am

can help setup rat?

I have router and ip static

my skype is zero aboslut rs

James711 - November 23, 2015, 12:07 pm

Will Babylon work if I have AVG?

xVulnerable - November 23, 2015, 12:09 pm

(Nov 23, 2015 01:07 PM)James711 Wrote: [\[CITE\]](#) Will Babylon work if I have AVG?

Probably not. It is highly recommended to uninstall all AVs.

yosefebesh - November 23, 2015, 1:25 pm

No I mean you must actually ping your DNS not google.ca.....

If it's setup correctly it should ping to your IP.

**food8423** - November 24, 2015, 4:36 am

hey so im coming back to ratting and ive been having some trouble again lately i upgraded to windows 10 and for some reson its not working tried everything possible in need of professional help

How about you start describing your problem and what type of troubleshooting have you done if any?

**yosefebesh** - November 24, 2015, 7:49 am

(Nov 24, 2015 06:30 AM)xVulnerable Wrote: [\[CITE\]](#) How about you start describing your problem and what type of troubleshooting have you done if any?

I pinged my DNS, lol...

First I pinged google, showing my internet was working fine

then I pinged my DNS, but I covered the DNS and all other IP's.

My DNS is pinging fine habibi

**food8423** - November 24, 2015, 8:27 am

okay my ports am fine i think ive added firewall rules on my router and it shows that they are open, when i do local ip test that also work, ive pinged my dns and that also works so i think theres some settings i have to change on my router but i cant seem to figure it out

**Gamer222** - November 24, 2015, 9:16 am

I have some startup error messages on machine restart, if you do have an virtualbox/vmware, maybe you could help me out? This would only take less then a minute. Willing to pay a little.

**Yakz** - November 24, 2015, 12:56 pm

What's the issue exactly?

(Nov 24, 2015 10:16 AM)m4Ntiz Wrote: [\[CITE\]](#) I have some startup error messages on machine restart, if you do have an virtualbox/vmware, maybe you could help me out? This would only take less then a minute. Willing to pay a little.

I have a tutorial up on how to setup a VM, just use a windows 7 ISO instead of kali.

<https://hackforums.net/showthread.php?tid=4018513>

It's best you setup your own so you can do all the testing you want, if there's an issue with the bin, check out one of my other threads. <https://hackforums.net/showthread.php?tid=4958233>

Let me know if you have any issues doing the above.

You don't need to change any firewall settings from your router. Just portforward and make sure they are open. You can confirm on [www.canyouseeme.org](http://www.canyouseeme.org) (make sure you are listening to the port on the RAT, so you must have your RAT open.)

Turn off windows firewall & defender, confirm your ports are open by following my instructions and post again.

(Nov 24, 2015 10:16 AM)m4Ntiz Wrote: [\[CITE\]](#) I have some startup error messages on machine restart, if you do have an virtualbox/vmware, maybe you could help me out? This would only take less then a minute. Willing to pay a little.

(Nov 24, 2015 03:39 PM)yosefebesh Wrote: [\[CITE\]](#) Went through the whole checklist, still not working

Send me a picture that shows your open port, either do it on canyouseeme (you have to listen to the port in order for it to be shown) or go to command prompt and type in "netstat -b" (no quotes) look for the port and see if it says "LISTENING" which means it's waiting for a connection.

Also send me a picture of the settings on your RAT client.

Where are you testing it btw? Have you setup a virtual machine to do your testing on? Have you tried without crypting your bin or adding additional setting like anti sandbox, etc..

**rexxturbo** - November 25, 2015, 10:20 am

Hi

I am having problems running RATs in my home lab. I have tried various RATs, I can get them to work within my home network, but I cant get them to go out and come back.

I am running 2 VM networks in bridged mode, Windows 7, all firewall/AV disabled "also disabled on host PC"

I set up an account with FreeDNS. I can ping the host name and NanoCore is able to resolve it.

Canyouseeme.org says it can see the port I am using.

For some reason I can not get any active connections.

Please help

Never mind

Figured it out. Even though canyouseeme.org said it could see my port the connection in Nanocore was not populated until I port forwarded my Router

Can someone explain why this is?

Thanks

**Yakz** - November 25, 2015, 11:50 am

Are you sure canyousee me said the port was open? Which port were you using? Maybe it was being used by another service.

**wht.d.fck.** - November 25, 2015, 1:10 pm

so when using Luminosity Link and crypt that built exe with Codelux Protector (Crypter), on execution of that crypted file some windows appear on the target machine.

on some settings you see some cmd windows, on some other settings you see a strange small box pop up and disapear in no time.

i was following the youtube tutorial which is posted in the sales thread of Codelux, which tells you how to use this crypter in combination with Luminosity.

still i do not want any windows to appear on execution. is there any way to avoid this? any special settings?

running an non-crypted exe from Luminosity does not make those windows appear.

also, on reboot of the target, the user gets an information dialog which asks him whether he wants to run this application or not (the exe file). this should be avoidable as well, right?

**Yakz** - November 25, 2015, 2:43 pm

(Nov 25, 2015 02:10 PM)wht.d.fck. Wrote: [\[CITE\]](#) also, on reboot of the target, the user gets an information dialog which asks him whether he wants to run this application or not (the exe file). this should be avoidable as well, right?

In the client builder tab, tick the box "Silent mode" in the bottom right.

running an non-crypted exe from Luminosity does not make those windows appear.  
Try with inject "Itself" with no additional functions like anti sandbox, etc. If that does not work try all settings and remove them one by one to see which one corrupts your bin.

hey brother i want to ask that Njrat is still active or it is outdated ?? if it is outdated then what rat u suggest us

**Yakz** - December 2, 2015, 9:52 am

(Dec 1, 2015 01:37 PM)anonymousskiller Wrote: [\[CITE\]](#) hey brother i want to ask that Njrat is still active or it is outdated ?? if it is outdated then what rat u suggest us

I doubt that free RATs in general get updated, although they still function fine. Go with Njrat or whatever suits you best.

**Therm?!l** - December 6, 2015, 12:18 pm

What's the best free RAT to start out with?

**xVulnerable** - December 6, 2015, 1:14 pm

(Dec 6, 2015 01:18 PM)Thermal the Prophet Wrote: [\[CITE\]](#) What's the best free RAT to start out with?

njRAT is very good for beginners IMO.

Most websites distribute samples. That's basically an AV analyzing your file. Do not upload files on mediafire (or any other), especially crypted files. Use [www.sharesend.com](http://www.sharesend.com)

Enter your ip address which you see on [www.canyouseeme.org](http://www.canyouseeme.org) upon confirming your ports are open. Does it connect or not though? Try using 127.0.0.1 (LAN) first for testing.

(Oct 7, 2016 07:57 PM)FoKilPt Wrote: [\[CITE\]](#) If I select that box I linked above and enter my IP and a forwarded port this should work correct? I dont understand.. Will pay for someone to TeamView my PC and fix it.

Make sure there is no link to your IP from your DNS provider to stay anonymous. Having your own domain & DNS works as long as anonymity precautions are taken when purchasing and accessing your domain. Yes namecheap would work. Paid rats are not better than free rats. Encrypt your drive with truecrypt.

**Null** - March 21, 2017, 5:37 pm

(Mar 21, 2017 07:07 AM)xVulnerable Wrote: [\[CITE\]](#) Make sure there is no link to your IP from your DNS provider to stay anonymous. If that does not work Netwire might be blocked inside of a firewall somewhere.

Sure you don't mind x. ?Thanks I'll give it a try

**xVulnerable** - May 20, 2017, 11:44 pm

(May 20, 2017 03:22 PM)Its U i SEEK Wrote: [\[CITE\]](#) Then is Says port closed.

You're not listening to the port on netwire then. That or something's blocking it. Make sure u have no AVs installed including windows defender and firewall.

**Rahul007rhp** - May 27, 2017, 1:38 am

Just stuck with some error on spynote Pm'ed you for help

Thanks

**c0d3rs** - May 28, 2017, 9:16 am

can someone help me ? well i have just used a tut to open a port on the Utorrent/ bittorrent , my port is open , i can see it on canyouseeme.org , so i try it on 127.0.0.1 it works as charm , but while i add the IP/DNS , i have tried freedns , duckdns , no ip = all these DNS i am using right now just for testing , so i always end up there is no connection , and yeah my PORT IS OPEN ? used sandboxie and VM , but there is still nothing ? Thanks for any feedback

Could possibly be it's not open. Why not portforward ur router or use a vpn?

**Jak!** - May 28, 2017, 12:16 pm

Sent you a PM need help if you wouldn't mind.

**Kosser** - July 5, 2018, 7:21 pm

Hey iv been using Rats in a liberal sense for a while now, I want to learn how to attach my Rats to PDFs and PNGs.

Also I want to learn how to actually start using my rats silently without triggering Windows Defence, is there a free way to do so ?

**iam-random** - July 6, 2018, 2:28 am

I was using QuasarRAT for a long time but its hard to crypt or to find a crypter that work with it, I have switched to Lime-RAT, can you recommend any crypter for this rat? I want to bypass windows defender x(

**mekulous** - August 13, 2018, 1:49 am

Hello @xVulnerable, can you give me an official download link to your NJrat. Thanks

**Jdutchman121** - August 13, 2018, 1:05 pm

(Aug 13, 2018 01:49 AM)mekulous Wrote: [\[CITE\]](#) Hello @xVulnerable, can you give me an official download link to your NJrat. Thanks

Use Qasar instead opensource both dotnet

can you tell if one can port forward through a VPS for RAT?

not OpenVPN it blocked all ports last time i tried

**alibobo** - August 14, 2018, 3:20 pm

Have 3 questions, What are the best rat you know, What is the best java crypter. Between java rat and other window rat. which is best?

**Kmtoto** - August 15, 2018, 11:24 am

Hello, i need a vpn to use a RAT? because it's more safe?

And which rat should i take ?

**AnonGhost12** - August 23, 2019, 7:37 pm

Can U help me setup my Unknown RAT

**Cooooool** - August 23, 2019, 8:00 pm

(Aug 23, 2019 07:37 PM)AnonGhost12 Wrote: [\[CITE\]](#) Can U help me setup my Unknown RAT

No, he can't. Don't use Unknown if you don't know what you are doing.

**AnonGhost12** - August 23, 2019, 9:35 pm

Cooooool am not that noob but a learner i believe that's why we are here to learn what we don't know and am not asking for free stuff

**Cooooool** - August 23, 2019, 9:39 pm

You're asking for a free setup.

**AnonGhost12** - August 24, 2019, 8:27 am

if the person come up with his price i will pay for it because nothing comes free and when someone want to teach u for free they will teach u everything they know personally but paid service comes with everything, so get that clear

**xVulnerable** - July 31, 2020, 10:52 pm

Currently online willing to help anyone.

Personal information/files can still be accessed. If testing with sandboxie on your main pc, turn off internet access from restrictions in sandboxie settings.

**SIM-2327840** - August 4, 2020, 4:14 pm

not a question but damn bro i remember your threads since I joined the forum. Same avatar pic since then!

**xVulnerable** - August 25, 2020, 3:11 pm

(Aug 4, 2020 04:14 PM)Mao Wrote: [\[CITE\]](#) not a question but damn bro i remember your threads since I joined the forum. Same avatar pic since then!

What can I say. I'm an OG. ?

**Carlbrave** - August 29, 2020, 4:46 am

Hello, I'm facing a "strange" issue using remote desktop with RAT.

When through remote desktop control I try to go to sites like amazon, ebay etc., it seems like those sites "realize" that i'm accessing to them through an external tool.

How is it possible?

As rat I tried with bitrat and quasar, same results.

What do you think about it?

**intotheblues123** - August 30, 2020, 1:36 pm

Bro which is best RAT for windows these days which can infect upto windows 10? especially the one which is having source code over the web.. also please guide me the best android rat which works across all devices

**xVulnerable** - August 30, 2020, 11:38 pm

I can't answer your questions. There is no best RAT. And I never owned an android in my life so I can't help with that either. Almost all RATs are made for Windows.

**Carlbrave** - August 30, 2020, 11:49 pm

It makes me realize it the "constant" message I receive from some sites (amazon, paypal, ebay etc) that there are suspicious or unusual activities

I can't think of anything if you're accessing it remotely. "Suspicious or unusual activities" could be referring to something else that has nothing to do with you accessing remotely, so it's fine.

**talene31** - August 31, 2020, 6:07 am

What crypter should I get for mass spread?

**xVulnerable** - August 31, 2020, 10:18 am

(Aug 31, 2020 06:07 AM)talene31 Wrote: [\[CITE\]](#) What crypter should I get for mass spread?

I don't do crypter recommendations. It's not like I can test all the crypters on the market and give them a rating.

But here's my 2 cents:

- Don't go for cheap crypters
- Make sure vendor offers decent support
- Most crypters are advertised as FUD but only stay FUD for a very short time

Especially with mass spreading, no crypter owner is going to sell you their crypter if you tell them that. The stub will get detected very fast.

**Dotexe** - August 31, 2020, 10:30 am

Good to see that you are still offering that :)
